

**“A STUDY ON QUALITY OF WORKLIFE BALANCE AND OCCUPATIONAL
STRESS AMONG EMPLOYEES”**

A project submitted to St. Francis College for Women as part of the
curriculum for the Bachelor of Science

By

Ms. KODUKULA SRAVANI

(121321044033)

Ms. RAVALKOL PRAVALIKA

(121321044050)

UNDER THE GUIDANCE OF

MS. G. PRIYANKA

Assistant Professor

Department of Statistics

St. Francis College for Women

(Autonomous and affiliated to Osmania University)

Begumpet, Hyderabad

MARCH 2024

St. Francis

College for Women

Begumpet, Hyderabad-500016

(Autonomous & Affiliated to Osmania University)

CERTIFICATE

This is to certify that this bonafide group project work titled “**A STUDY ON QUALITY OF WORKLIFE BALANCE AND OCCUPATIONAL STRESS AMONG EMPLOYEES**”, has been carried out by

Ms. KODUKULA SRAVANI

(121321044033)

Ms. RAVALKOL PRAVALIKA

(121321044050)

towards partial fulfillment of the requirements for the award of Degree of Bachelor of Science from St. Francis College for Women, Begumpet in the academic year **2023-24**.

Supervisor

Head of the Department

External Examiner

Controller of Examinations

DECLARATION

The current study titled “**A STUDY ON QUALITY OF WORKLIFE BALANCE AND OCCUPATIONAL STRESS AMONG EMPLOYEES**”, has been carried out under the supervision of, **Ms. G. Priyanka**, Assistant Professor, Department of Statistics, St. Francis College for Women.

We hereby declare that the present study that has been carried out by,

Ms. KODUKULA SRAVANI (121321044033)

Ms. RAVALKOL PRAVALIKA (121321044050)

during November-February, 2023-2024 is original and no part of it has been carried out prior to this date.

Date:

Signature of Candidate:

ACKNOWLEDGEMENT

We express our sincere thanks to St. Francis College for Women for giving us this wonderful opportunity to take up this project. We are thankful to our beloved principal Ms. Dr.Uma Joseph for allowing us to apply our knowledge to work on this project.

A heartfelt gratitude to our HOD, Dr. Ch. Yugandhar and Asst.Professor G.Priyanka who was our guide for this project and who was always available to clarify our doubts.

We would also like to thank all the respondents of our project who helped us to achieve realistic results.

Ms. KODUKULA SRAVANI

Ms. RAVALKOL PRAVALIKA

ABSTRACT

ABSTRACT

This project aims to investigate the intricate relationship between the quality of work life and occupational stress experienced by employees in contemporary workplaces. Quality of work life encompasses various factors, including job satisfaction, work-life balance, organizational culture, and employee well-being. Understanding these elements is crucial for fostering a positive work environment and enhancing overall employee satisfaction. The first part of the study involves an in-depth exploration of the current literature on quality of work life and occupational stress, laying the groundwork for a comprehensive analysis.

The second phase of the project involves empirical research, employing surveys and interviews to collect data directly from employees across diverse industries. By examining the day-to-day experiences of workers, we aim to identify specific factors influencing their quality of work life and the sources of occupational stress. This data-driven approach allows for a nuanced understanding of the challenges employees face, providing valuable insights for organizations seeking to improve working conditions and create a supportive atmosphere. The project will utilize both qualitative and quantitative methods to ensure a well-rounded perspective on the subject.

In the final phase, the project will offer practical recommendations based on the findings, designed to enhance the quality of work life and mitigate occupational stress among employees. These recommendations will be tailored to address specific issues identified during the research, providing actionable insights for organizations to implement positive changes. Ultimately, this project contributes to the ongoing discourse on workplace well-being, offering a valuable resource for employers, human resource professionals, and policymakers striving to create environments that promote both professional success and employee satisfaction.

CHAPTER-1

INTRODUCTION

INTRODUCTION

QUALITY OF WORK LIFE

Quality of Work Life (QWL) refers to the overall well-being of employees in their work environment, encompassing various factors that influence their job satisfaction and performance. This concept emphasizes the importance of creating a positive and supportive workplace culture.

SIGNIFICANCE OF QUALITY OF WORK-LIFE.

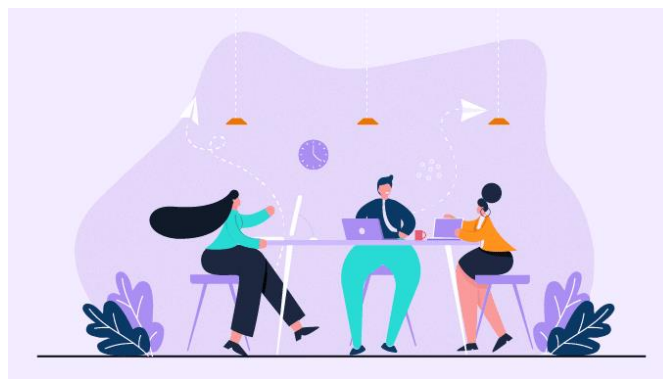

In the contemporary landscape of work, the concept of Quality of Work-Life (QWL) stands as a pivotal consideration in understanding the well-being and satisfaction of employees within their respective organizations. Quality of Work-Life encapsulates a multifaceted approach to assessing and enhancing the overall experience of individuals in their professional roles, encompassing various dimensions that contribute to their sense of fulfillment, engagement, and happiness.

The importance of Quality of work-life among employees cannot be overstated. As organizations navigate the complexities of a rapidly evolving global economy, they increasingly recognize the integral role that employee well-being plays in driving organizational success. Beyond merely focusing on productivity and profitability, forward-thinking organizations understand that prioritizing QWL leads to higher levels of employee engagement, retention, and overall performance.

At its core, Quality of Work-Life delves into the myriad factors that shape employees' experiences in the workplace. From job satisfaction and work-life balance to opportunities for growth and development, workplace culture, and the overall physical and mental health of employees, QWL encompasses a broad spectrum of considerations. By addressing these elements comprehensively, organizations can create environments that foster a greater sense of purpose, belonging, and fulfillment among their workforce.

Moreover, in an era where talent acquisition and retention have become increasingly competitive, organizations that prioritize Quality of Work-Life gain a distinct advantage. They attract top talent who seek not only financial rewards but also environments that support their personal and professional well-being. In turn, these engaged and satisfied employees become advocates for their organizations, driving innovation, productivity, and ultimately, long-term success.

CONCEPT OF QUALITY OF WORK-LIFE

The concept of Quality of Work-Life (QWL) represents a comprehensive approach to understanding and enhancing the well-being of employees within their work environments. It encompasses various dimensions that contribute to individuals' overall satisfaction, happiness, and fulfillment in their professional roles. QWL emerged as a response to the realization that success in the workplace should not be solely measured by financial gains or career advancements but also by the quality of experiences and relationships within the work environment.

Key components of the Quality of Work-Life concept include:

1. **Job Satisfaction:** This refers to the extent to which employees feel content and fulfilled with their roles, tasks, and responsibilities. Factors influencing job satisfaction include the nature of the work, opportunities for skill development, recognition, and the alignment of individual values with organizational goals.

2. **Work-Life Balance:** Achieving a healthy equilibrium between work demands and personal life commitments is essential for overall well-being. Work-life balance involves having sufficient time and energy to pursue activities outside of work, such as spending time with family, engaging in hobbies, and taking care of personal health.

3. **Physical and Mental Health:** A supportive work environment promotes the physical and mental well-being of employees. This includes access to healthcare resources, ergonomic workspaces, stress management programs, and initiatives to foster resilience and coping skills.
4. **Workplace Culture:** A positive workplace culture characterized by trust, respect, and collaboration enhances the overall quality of work-life. Cultivating a culture of inclusivity, open communication, and appreciation for diversity fosters a sense of belonging and engagement among employees.

5. **Career Development Opportunities:** Providing avenues for growth, advancement, and skill development is crucial for employee satisfaction and retention. Organizations that offer training programs, mentorship opportunities, and clear pathways for career progression demonstrate a commitment to supporting their employees' professional development.
6. **Compensation and Benefits:** Fair and competitive compensation, along with comprehensive benefits packages, contribute to employees' overall satisfaction and well-being. Providing benefits such as healthcare coverage, retirement plans, paid time off, and employee assistance programs demonstrates an organization's commitment to supporting its employees' financial security and welfare.

Overall, the concept of Quality of Work-life recognizes that employees are not merely resources but valuable contributors whose well-being directly impacts organizational performance and success. By prioritizing the various dimensions of QWL, organizations can create environments where employees feel valued, motivated, and empowered to achieve their full potential, ultimately leading to enhanced productivity, retention, and overall organizational effectiveness.

OCCUPATIONAL STRESS:

Occupational stress is a significant component of the Quality of work life, arising from factors such as workload, job insecurity, lack of autonomy, and interpersonal conflicts. Managing and mitigating occupational stress is crucial for maintaining a healthy work-life balance.

BACKGROUND

The term "stress" was first used by the endocrinologist Hans Selye in the 1930s to identify physiological responses in laboratory animals. He later broadened and popularized the concept to include the perceptions and responses of humans trying to adapt to the challenges of everyday life.

It refers to the inability of a human or animal body to respond. Common stress symptoms include irritability, muscular tension, inability to concentrate, and a variety of physical reactions, such as headaches and accelerated heart rate.

In recent decades, occupational stress has represented a large, complex, and costly phenomenon in the workplace worldwide. According to the International Labour Organization (ILO), the workplace environment has been severely affected by globalization and the global financial crisis, leading to an increase in demand as well as stress and related problems. For instance, in the U.K., stress is the leading cause of absenteeism at work. Concerning the U.S., 83% of employees experience occupational stress. Alongside the impact on employees' health and well-being, the effect of occupational stress on the economy is quite notable. For example, problems arising from stress cost U.S. enterprises approximately USD 300 billion in health care. As the

ILO reported, the estimated employers' total annual cost with mental health disorders among their staff was nearly £26 billion in the U.K. and €617 billion in Europe.

FACTORS INFLUENCING OCCUPATIONAL STRESS

Occupational stress can be influenced by the following factors:

1. WORKLOAD: Work-related stress is a growing problem around the world that affects not only the health and well-being of employees but also the productivity of organizations. Work-related stress arises when work demands of various types and combinations exceed the person's capacity and capability to cope.

2. INTERPERSONAL CONFLICTS: Interpersonal conflicts often lead to emotional distress such as anger, frustration, anxiety, and sadness, which can increase stress levels for those involved. It can disrupt workflow, decrease collaboration, and create distractions, ultimately reducing productivity and increasing stress as deadlines and goals become harder to meet.

3. JOB INSECURITY: The fear of losing one's job or uncertainty about future employment prospects can lead to heightened levels of anxiety and worry among employees, contributing to overall stress levels. It can lead to financial instability as employees worry about their ability to meet financial obligations such as paying bills, supporting their families, or saving for the future, adding significant stress.

4. INADEQUATE WORK-LIFE BALANCE: Poor work-life balance can lead to physical health problems such as fatigue, sleep disturbances, headaches, and gastrointestinal issues, which can contribute to overall stress and decreased well-being. Neglecting personal relationships and commitments due to work demands can strain relationships with family and friends, leading to conflicts and feelings of guilt, adding to stress levels.

5. PERSONAL FACTORS: Factors such as coping skills, personality traits, and individual resilience play a role in how individuals perceive and manage stress in the workplace. Personal circumstances, such as family responsibilities, caregiving obligations, and other life stressors, can influence individuals' ability to achieve a satisfactory work-life balance. Striking a balance between work and personal life can mitigate stress and promote overall well-being.

Altogether, occupational stress refers to the physical, mental, and emotional strain that individuals experience due to their work. It can result from various factors, including high workloads, tight deadlines, lack of control over work, conflicts with colleagues or superiors, and job insecurity.

OBJECTIVES

OBJECTIVES

1. To examine work-life balance and its impact on employee performance and satisfaction.
2. To identify key factors influencing job satisfaction and overall well-being of the employees.
3. To investigate interpersonal relationship and their role in shaping the work environment.
4. To analyze workload, role ambiguity, and organizational culture as potential stress factors.
5. To propose strategies and interventions to improve the quality of work life.
6. To contribute to creating a more positive, fulfilling, and sustainable work environment.

CHAPTER-2

LITERATURE

REVIEW

CHAPTER 2: LITERATURE REVIEW

1. The effect of work environment on job satisfaction Agbozo, G.K., 2017. The purpose of this study was to explore the effect of work environment on job satisfaction. Employees tend to prefer jobs that give them opportunities to use their skills and abilities and offer a variety of tasks, freedom, and feedback on how well they are doing. Jobs that have too little challenge create boredom but too much challenge creates frustration and a feeling of failure. The work environment may affect physical and mental health and is an essential element to maintaining workers can be divided into three categories: physical, social, and psychological work environment. The study of the effect of work environment on job satisfaction showed the work environment has a strong impact on job satisfaction and employee's intention to stay at work.

2. The impact of workplace stress on employees performance, DCS Gaumail, Lazarus, 2003 This research paper aimed at determining workplace stress.DCS Gaumail, 2003 believes that at the organizational level, research has found that work-related stresses may be responsible for organizational outcomes such as the decline in performance, dissatisfaction, lack of motivation and commitment, and increase in absenteeism and turnover. That is why so many organizations heavily rely on motivational theories to increase the stress of employees and to enhance their attitude towards initiatives. You can increase the employee's performance by rewarding them for what they are expecting.

3. Impact of job stress on employees' productivity and commitment, Levin – Epstein,2002. This paper aims to examine the factors that influence employees' productivity and commitment. Michal (1997) specified causes of stress as follows: poor time management, unclear job descriptions, feelings of inadequacy and insecurity, inability to get things done, lack of communication, bad personal relationships, and quality, and complexity of tasks. In the same breadth, Dean (2002) viewed stress-related illnesses as the leading cause of low productivity levels in the workplace. Immense pressure at work has led to stress, which made it the number one factor causing illness.

Michac (1997) outlined reasons for low productivity as follows; poor training in the company, machine breakdowns, non-established performance standards, lack of planning and motivation, change, poor atmosphere and environment, inadequate communication at many levels, and non-identification with company goals. Stress and its relation with the business world is that if not handled well it might lead to illness and also increase the time off taken by employees. As a result both, the organization and employees will be affected by it. But tension in the business world is also good to some extent and can lead employees to be motivated to work hard and increase their efficiency. Stress that puts the employee under pressure to the point that the employee won't be able to deal with the situation affects both the employee and the company negatively (CIPD, 2008).

4. The impact of quality of work life on employees` job performance, Ianja Hoshang Hamad, June 2018. Quality of work life includes many aspects that change the way employees behave.

Richard Walton (1973) introduced eight criteria of quality of work life: development of work life, work-life balance, adequate and fair compensation, healthy environment, social security, social relevance, constitutionalism, and immediate opportunity to use and develop human capacity, Hosseini has also mentioned these eight criteria (Hosseini, 2010, as cited in Swamy, Nanjundeswaraswamy, & Rashmi, 2015). Also in an article written by (Lokanadha Reddy and Mohan Reddy, 2010), they emphasized these eight criteria for quality of work life (Reddy, L & Reddy, M., 2010). R. Gayathri and Lalitha Ramakrishnan (2013) have added 3 more criteria to Walton's criteria such as leadership, job satisfaction, and job design. The human capital theory considers the service of an employee as an effort to the production in the fair; accordingly, employees are considered as resources due to their ability to lead future service (Flamholtz, 1972, as cited in Mirvis, Ph. H & Lawler, E.E, 1984). This is the responsibility of the organization to provide jobs, training, performance appraisal, and rewards to the employees for a reason that these factors affect the employee's value (Mirvis, Ph. H & Lawler, E.E, 1984). The concept of quality of work life must contain and emphasize on human needs and aspirations, for example, the intention of employers of how to be socially responsive.

5. Impact of growth need strength on the relationship between career salience and job satisfaction, Mohammad Nizam Sarkawi, Abdul Rahman Jaafar, 2017. This study will first explain various concepts of growth need strength on the relationship between career salience and job satisfaction. A study by Locke and Ortlepp (1997) aimed to assess the relationships between career salience and job satisfaction. Self-report data was collected from 86 employees' in Johannesburg. Pearson product-moment correlations, t-tests, and z-transformations were computed. The results indicated that there is a significant positive relationship between career salience and job satisfaction. This result was found according to the hierarchical level (Locke & Ortlepp, 1997).

However, in a later development in Malaysia, a study by Siti et. al., (2012) aimed to investigate the association between human capital and subjective career success among Malaysian university academic staff. It was discovered that both dimensions of human capital (work experience and job position) were not significant to subjective career success (career satisfaction). Perhaps, there might be some reasons that can best explain such phenomena that cause low career satisfaction, which is unarguably best known to the academicians themselves. They suggest that future research should focus on the investigation into the causes which would draw a full picture of the overall situation in career success (Siti et. al., 2012).

6. Quality of work life and its role in job satisfaction of organizations, Elmi and Hashemzadeh, 2009. The purpose of this paper is to explore the content of research on the quality of work life. Good quality of work life can increase job satisfaction and job performance, reduce absenteeism, and increase organizational effectiveness and organizational commitment (Golkar, 2013, p. 215). Quality of work life is an important way of motivation in the design and job enrichment is rooted in the attitudes of staff motivation which is one of the most important issues in the sociology of work and employment in organizations, nowadays. The quality of life includes all works to preserve and protect the flesh and spirit of the staff and provide their satisfaction, contentment, and trust (Elmi and Hashemzadeh, 2009).

CHAPTER-3

METHODOLOGY

CHAPTER 3: METHODOLOGY

Both primary and secondary research has been carried out for this project.

- **Sample design:** Random samples of 150 respondents were chosen for the research through the questionnaires developed to find out the activities in which present-day people are more interested and are involved.

- **Tools and Technique of Analysis:** The analysis done for the data obtained by the technique of random sampling is primarily descriptive in nature.

- **Source of data:**

1. **Primary Data:** The data, that has been collected for the first time and is original, is primary data. In this project, the primary data is in the form of a structured questionnaire.

2. **Secondary Data:** The secondary information is mostly taken from websites, books, journals, and magazines.

DIAGRAMATIC REPRESENTATION:

Bar Diagram: A bar graph is a chart that uses bars to show comparisons between categories of data. The bars can be either horizontal or vertical. Bar graphs with vertical bars are sometimes called vertical bar graphs.

Pie chart: A pie chart is a circular chart divided into sectors; each sector shows the relative size of each value

DATA TYPE

Data:

The data used in the study is primary data. The primary data for the research project was acquired through questionnaires and the secondary sources of information were magazines, publications, and the Internet. The primary data was further studied using the chi-square test of independence between the attributes in the questionnaires.

Mode of data collection:

Data is collected through the questionnaire method.

Questionnaire:

The questionnaire was formed with care ensuring that it is clear, brief nonambiguous, and with non-offending statements.

Population:

The population considered for study is the population of 18 years and above.

Sample:

A sample of 150 people was taken from various families in Hyderabad.

Data tabulation:

The questionnaire was serially numbered, and data was coded and tabulated using SPSS Statistics 26th version.

Statistical analysis:

Analysis was done using the SPSS Statistics 26th version.

STATISTICAL TECHNIQUES USED FOR DATA ANALYSIS**Frequency distribution:**

The most important part of organizing and summarizing statistical data is constructing a frequency distribution table. In this method, classification is done according to quantitative magnitude.

Chi-square test for independence of attributes:

The chi-square test is used to test the independence of attributes. With the help of this test, it is possible to assess the significance of the difference between the observed and expected frequencies.

Test statistic:

$$\chi^2 = \sum_i \sum_j \frac{(O_{ij} - E_{ij})^2}{E_{ij}}$$

P-level:

The p-level represents the probability of error that is involved in accepting our observed result as valid, that is as representative of the population. The p-level of 0.05 is customarily treated as borderline accepted at a level.

Decision rule:

If $p < 0.05$, then p is significant, and we reject H_0 i.e., the attributes are dependent at 5% level of significance.

Coefficient of contingency:

When H_0 is rejected the amount of association between two attributes is given by the Coefficient of contingency.

$$C = \sqrt{\frac{\chi^2}{\chi^2 + N}}$$

Where N =total frequency, χ^2 =calculated.

CHAPTER-4

STATISTICAL ANALYSIS - I

1. AGE

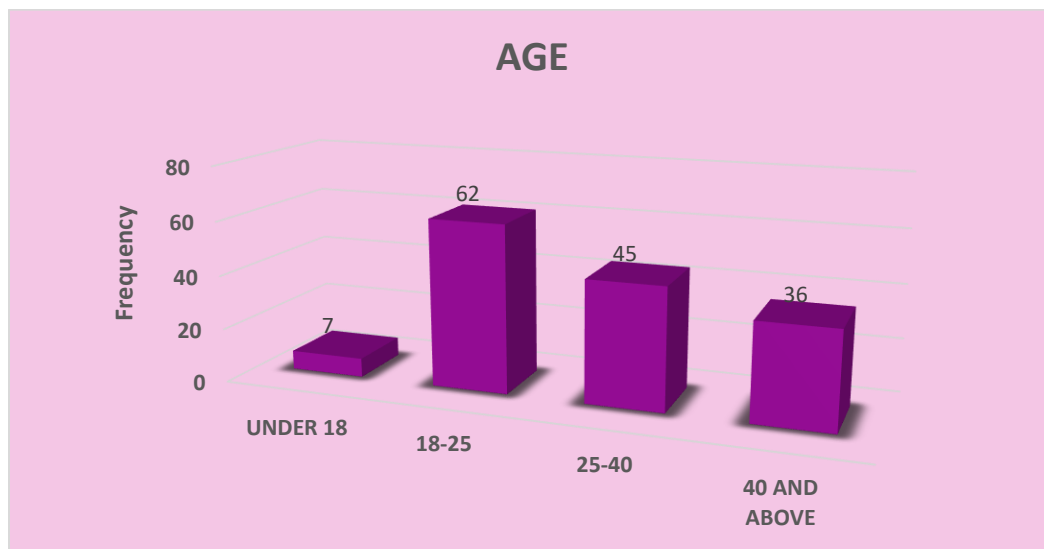

a) Under 18 b) 18-25 c) 25-40 d) 40 & above

FREQUENCY TABLE:

Table 4.1

Age	Frequency	Percent	Cumulative Percent
UNDER 18	7	4.7	4.7
18-25	62	41.3	46
25-40	45	30	76
40 & ABOVE	36	24	100
Total	150	100	

Figure 4.1

CONCLUSION:

According to the survey, among 150 respondents,

- 62(41.334%) respondents are under age group 18-25.
- 45(30%) respondents are under the age group 25-40.
- 36(24%) respondents are under the age group 40 & above.
- 7(4.666%) respondents are under 18.

2. GENDER

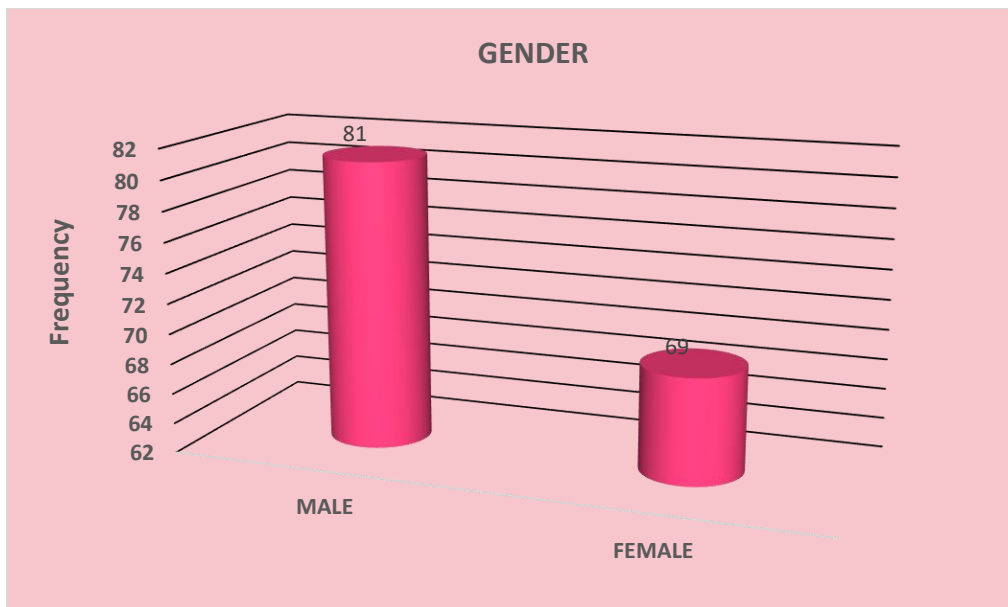

a) Male b) Female

FREQUENCY TABLE:

Table 4.2

Gender	Frequency	Percent	Cumulative Percent
MALE	81	54	54
FEMALE	69	46	100
Total	150	100	

Figure 4.2

CONCLUSION:

According to the survey, among 150 respondents,

- 81(54%) respondents are male.
- 69(46%) respondents are female.

3. EDUCATIONAL QUALIFICATION:

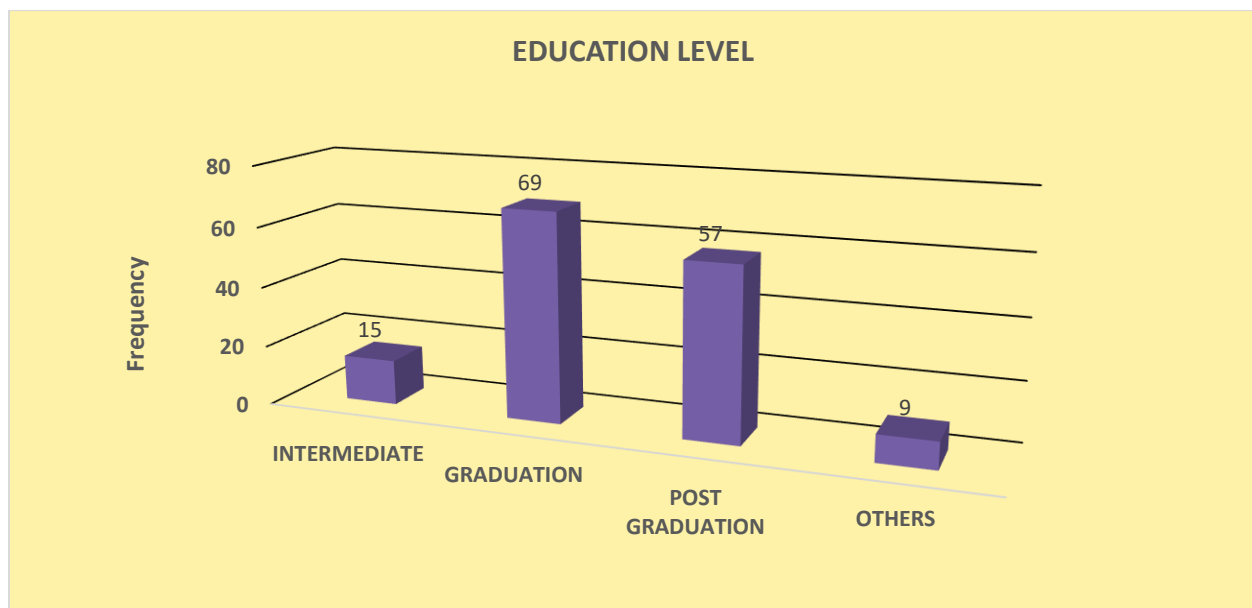

a) Intermediate b) Graduation c) Post Graduation d) Others

FREQUENCY TABLE:

Table 4.3

	Frequency	Percent	Cumulative Percent
INTERMEDIATE	15	10	10
GRADUATION	69	46	56
POST GRADUATION	57	38	94
OTHERS	9	6	100
Total	150	100	

Figure 4.3

CONCLUSION:

According to the survey, among 150 respondents,

- 69 (46.0%) respondents education level is graduation.
- 57(38.0%) respondents education level is post-graduation.
- 15(10.0%) respondents education level is intermediate.
- 9 (6.0%) respondents education level is other than intermediate, graduation, and post-graduation.

4. OCCUPATIONAL SECTOR

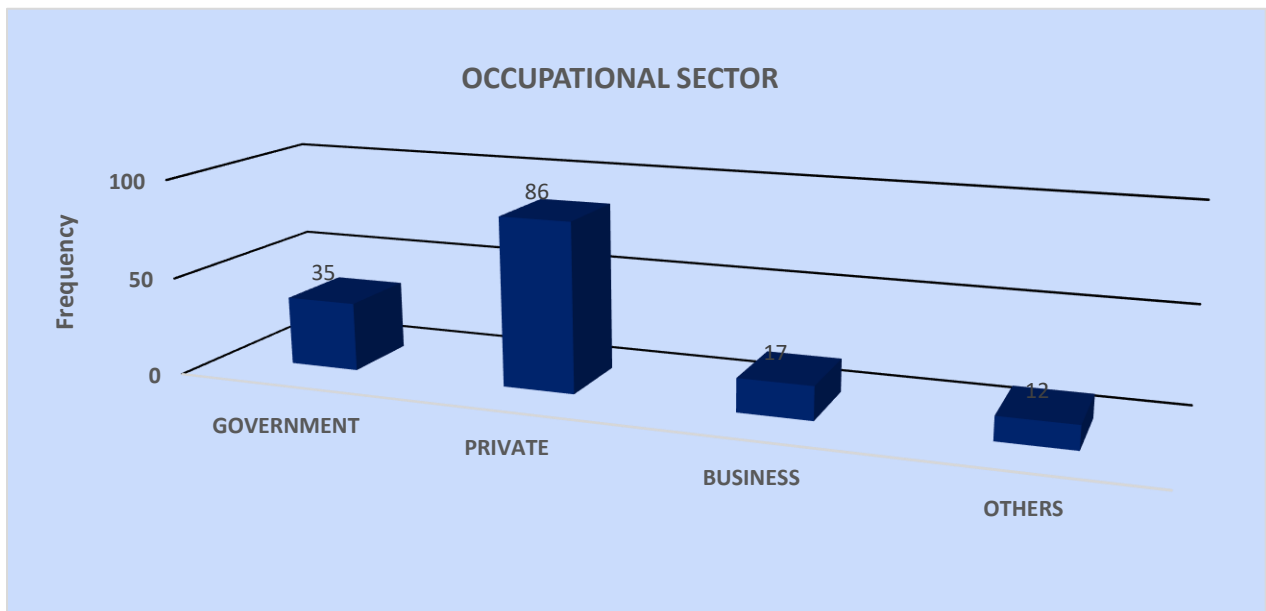

a) Government b) Private c) Business d) Others

FREQUENCY TABLE:

Table 4.4

OCCUPATIONAL SECTOR	Frequency	Percent	Cumulative Percent
GOVERNMENT	35	23.3	23.3
PRIVATE	86	57.3	80.7
BUSINESS	17	11.3	92
OTHERS	12	8	100
Total	150	100	

Figure 4.4

CONCLUSION:

According to the survey, among 150 respondents,

- 86 (57.3%) respondents are private employees.
- 35 (23.3%) respondents are government employees.
- 17(11.3%) respondents are business professionals.
- 12(8%) respondents are from other sectors.

5. ANNUAL INCOME

a) Less than Rs.3,00,000

b) Rs.3,00,000 to Rs.5,00,000

c) Rs.5,00,000 to Rs.10,00,000

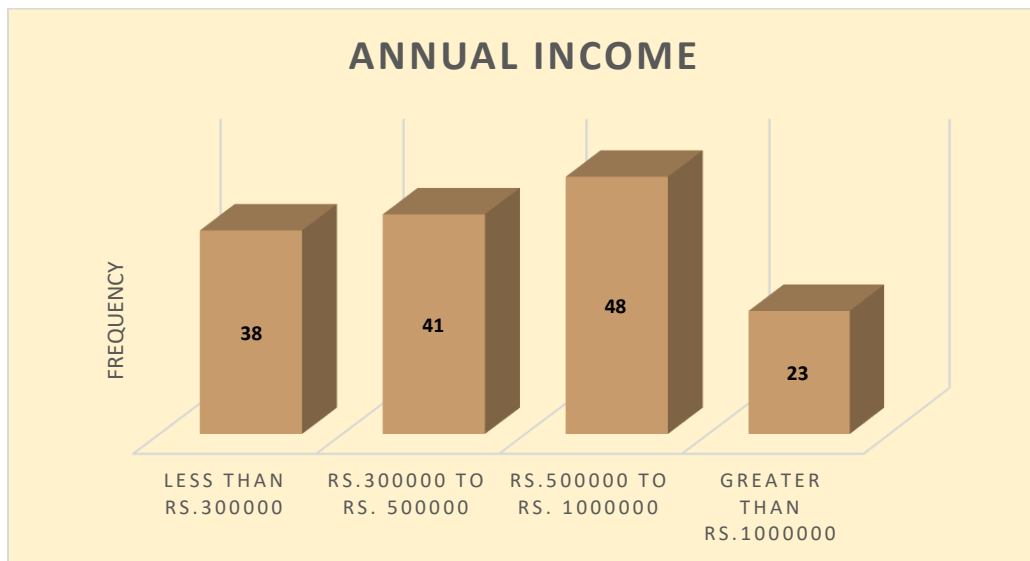

d) Greater than Rs.10,00,000

FREQUENCY TABLE:

Table 4.5

Annual Income	Frequency	Percent	Cumulative Percent
less than Rs.300000	38	25.3	25.3
Rs.300000 to Rs. 500000	41	27.3	52.7
Rs.500000 to Rs. 1000000	48	32	84.7
greater than Rs.1000000	23	15.3	100
total	150	100	

Figure 4.5

CONCLUSION:

According to the survey, among 150 respondents,

- 48 (34%) respondents annual income is between Rs.500000 to Rs. 1000000.
- 41 (34%) respondents annual income is between Rs.300000 to Rs. 500000.
- 38 (34%) respondents' annual income is less than Rs.300000.
- 23 (34%) respondents' annual income is greater than Rs.1000000.

6. NUMBER OF WORKING HOURS

a) Less than 6 hours

b) 6 to 10 hours

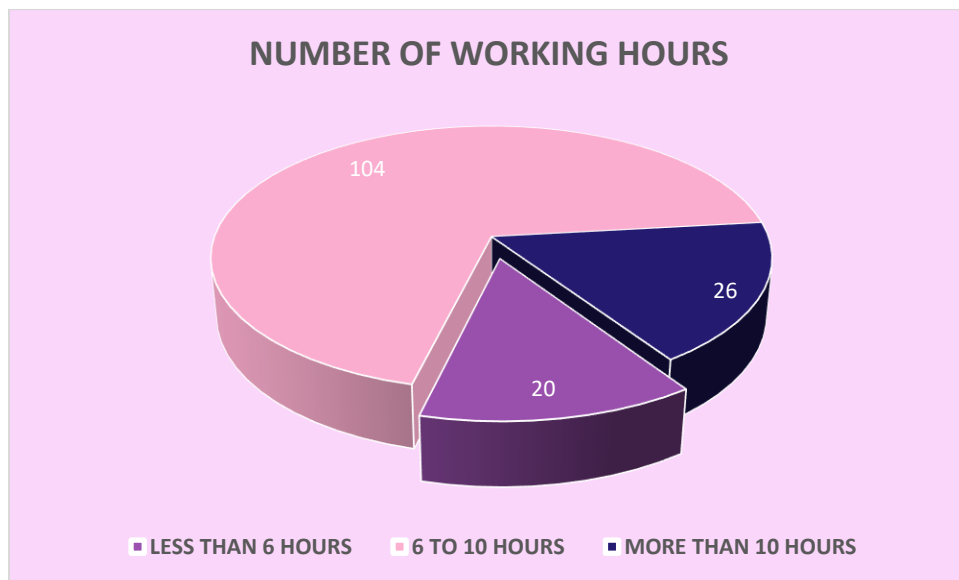

c) More than 10 hours

FREQUENCY TABLE:

Table 4.6

Number of Working Hours	Frequency	Percent	Cumulative Percent
less than 6 hours	20	13.3	13.3
6 to 10 hours	104	69.3	82.7
more than 10 hours	26	17.3	100
total	150	100	

Figure 4.6

CONCLUSION:

According to the survey, among 150 respondents,

- 104 (69.3%) respondents working hours are between 6 to 10 hours.
- 20(13.3%) respondents working hours are less than 6 hours.
- 26(17.3%) respondents working hours are more than 10 hours.

7. HOW SATISFIED ARE YOU WITH YOUR CURRENT WORKING HOURS?

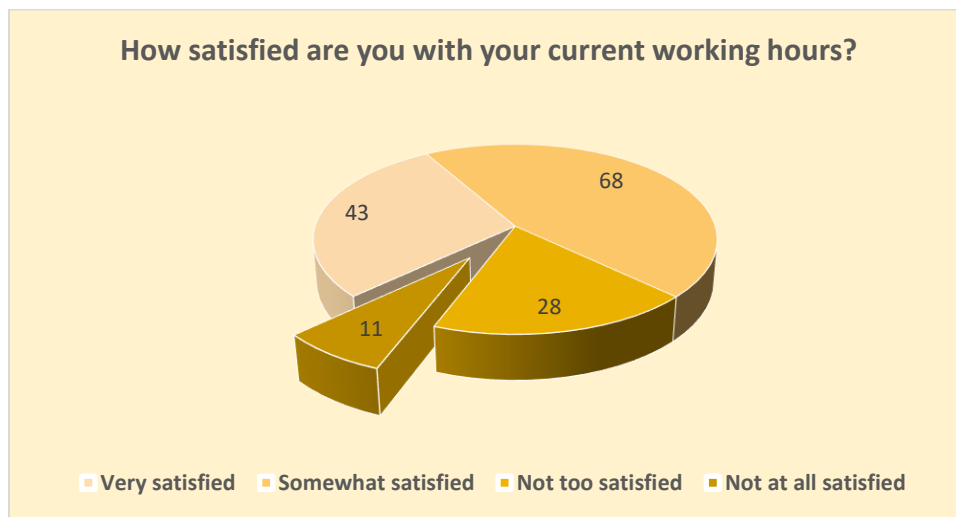

a) Very satisfied b) Somewhat satisfied c) Not too satisfied d) Not at all satisfied

FREQUENCY TABLE:

Table 4.7

	Frequency	Percent	Cumulative Percent
Very satisfied	43	28.7	28.7
Somewhat satisfied	68	45.3	74
Not too satisfied	28	18.7	92.7
Not at all satisfied	11	7.3	100
Total	150	100	

Figure 4.7

CONCLUSION:

According to the survey, among 150 respondents,

- 68(45.33%) respondents are somewhat satisfied with their current working hours.
- 43(28.66%) respondents are very satisfied with their current working hours.
- 28(18.66%) respondents are not too satisfied with their current working hours.
- 11(7.33%) respondents are not at all satisfied with their current working hours.

8. HOW LONG IS YOUR DAILY COMMUTE:

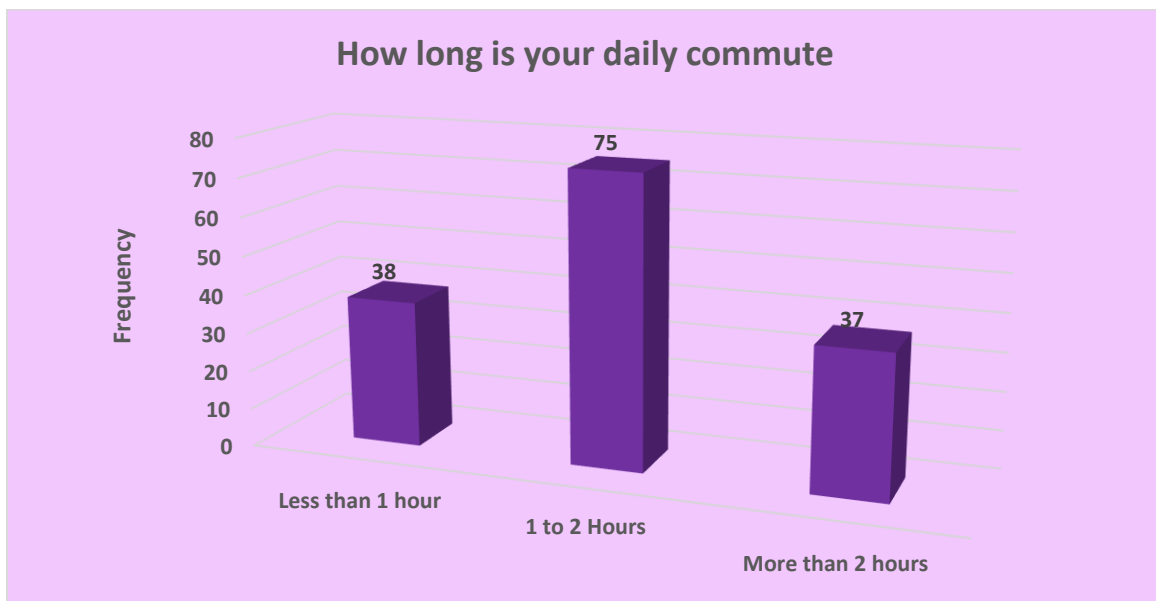

a) Less than 1-hour b) 1 to 2 hours c) More than 2 hours

FREQUENCY TABLE:

Table 4.8

Daily Commute	Frequency	Percent	Cumulative Percent
Less than 1 hour	38	25.3	25.3
1 to 2 Hours	75	50	75.3
More than 2 hours	37	24.7	100
Total	150	100	

Figure 4.8

CONCLUSION:

According to the survey, among 150 respondents,

- 75 (50.0%) respondents daily commute is between 1 to 2 hours.
- 38 (25.3%) respondents daily commute is less than 1 hour.
- 37 (24.7%) respondents daily commute is more than 2 hours.

9. HOW LONG HAVE YOU BEEN WORKING IN THE PRESENT ORGANIZATION?

a) Less than 1 year

b) 1-5 years

c) More than 5 years

FREQUENCY TABLE:

Table 4.9

	Frequency	Percent	Cumulative Percent
Less than one year	45	30	30
1 to 5 years	68	45.3	75.3
More than 5 years	37	24.7	100
Total	150	100	

Figure 4.9

CONCLUSION:

According to the survey, among 150 respondents,

- 68 (45.3%) respondents have been working in the present organization for less than one year.
- 45 (30%) respondents have been working in the present organization for approximately 1 to 5 years.
- 37 (24.7%) respondents have been working in the present organization for more than 5 years

10. WHICH OF THE FOLLOWING BEST DESCRIBES YOUR USUAL WORK SCHEDULE?

a) Day shift b) Night shift c) Split shift d) Irregular shift

FREQUENCY TABLE:

Table 4.10

	Frequency	Percent	Cumulative Percent
Day shift	86	57.3	57.3
Night shift	33	22	79.3
Split shift	21	14	93.3
Irregular shift	10	6.7	100
Total	150	100	

Figure 4.10

CONCLUSION:

According to the survey, among 150 respondents,

- 86 (57.3%) respondents have day shifts as their usual work schedule.
- 33 (22%) respondents have the night shift as their usual work schedule.
- 21 (14%) respondents have split shifts as their usual work schedule.
- 10 (6.7%) respondents have irregular shifts as their usual work schedule.

11 . HOW MUCH DO YOU WORK OVERTIME?

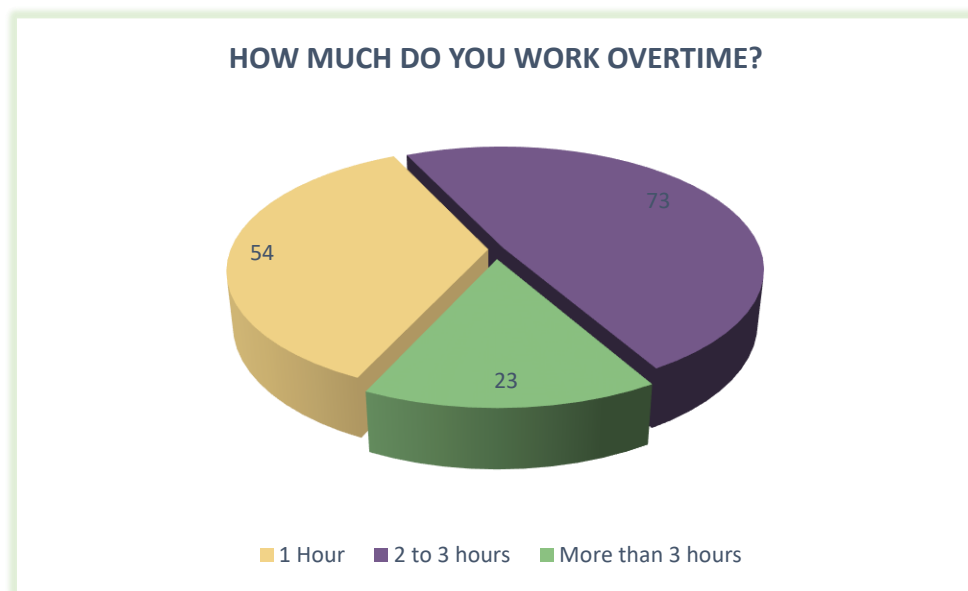

a) 1 hour b) 2 to 3 hours c) More than 3 hours

FREQUENCY TABLE:

Table 4.11

	Frequency	Percent	Cumulative Percent
1 Hour	54	36	36
2 to 3 hours	73	48.7	84.7
More than 3 hours	23	15.3	100
Total	150	100	

Figure 4.11

CONCLUSION:

According to the survey, among 150 respondents,

- 73 (48.7%) respondents work 2 to 3 hours of overtime.
- 54 (36%) respondents work 1 hour of overtime.
- 23 (15.3%) respondents work more than 3 hours of overtime.

12. HOW MANY HOURS DO YOU SLEEP ON AN AVERAGE WORK NIGHT?

a) Less than 4 hours

b) 4 to 6 hours

c) More than 6 hours

FREQUENCY TABLE:

Table 4.12

	Frequency	Percent	Cumulative Percent
Less than 4 hours	25	16.7	16.7
4 to 6 hours	61	40.7	57.3
More than 6 hours	64	42.7	100
Total	150	100	

Figure 4.12

CONCLUSION:

According to the survey, among 150 respondents,

- 64 (42.7%) respondents sleep more than 6 hours on an average work night.
- 61 (40.7%) respondents sleep 4 to 6 hours on an average work night.
- 25 (16.7%) respondents sleep less than 4 hours on an average work night.

13. AFTER AN AVERAGE WORK DAY, HOW MANY HOURS DO YOU HAVE TO RELAX OR PURSUE ACTIVITIES THAT YOU ENJOY?

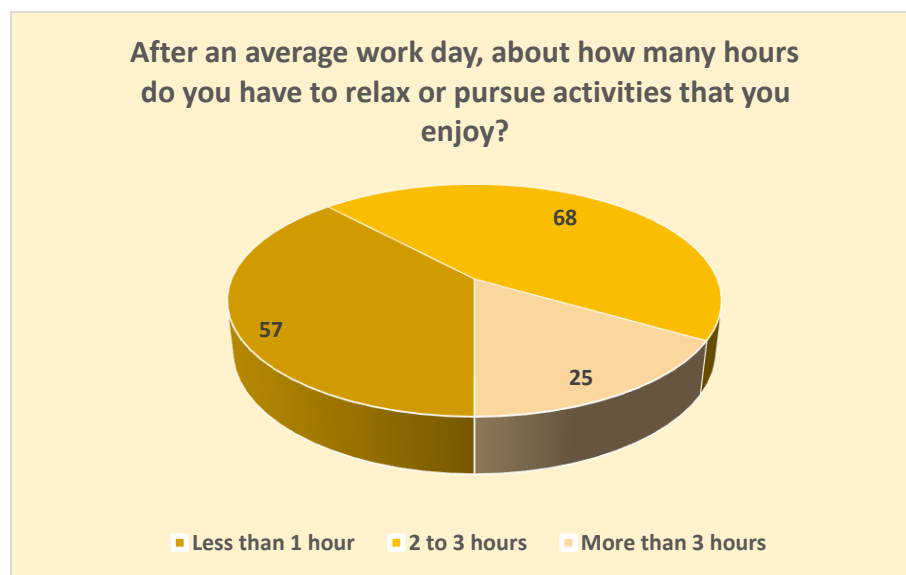

- a) Less than 1-hour b) 2 to 3 hours c) More than 3 hours

FREQUENCY TABLE:

Table 4.13

	Frequency	Percent	Cumulative Percent
Less than 1 hour	57	38	38
2 to 3 hours	68	45.3	83.3
More than 3 hours	25	16.7	100
Total	150	100	

Figure 4.13

CONCLUSION:

According to the survey, among 150 respondents,

- 68(45.3%) respondents have 2 to 3 hours to relax or pursue activities.
- 57(38%) respondents have less than 1 hour to relax or pursue activities.
- 25(16.7%) respondents have more than 3 hours to relax or pursue activities.

14 . HOW ALWAYS DO THE DEMANDS OF YOUR JOB INTERFERE WITH YOUR FAMILY LIFE?

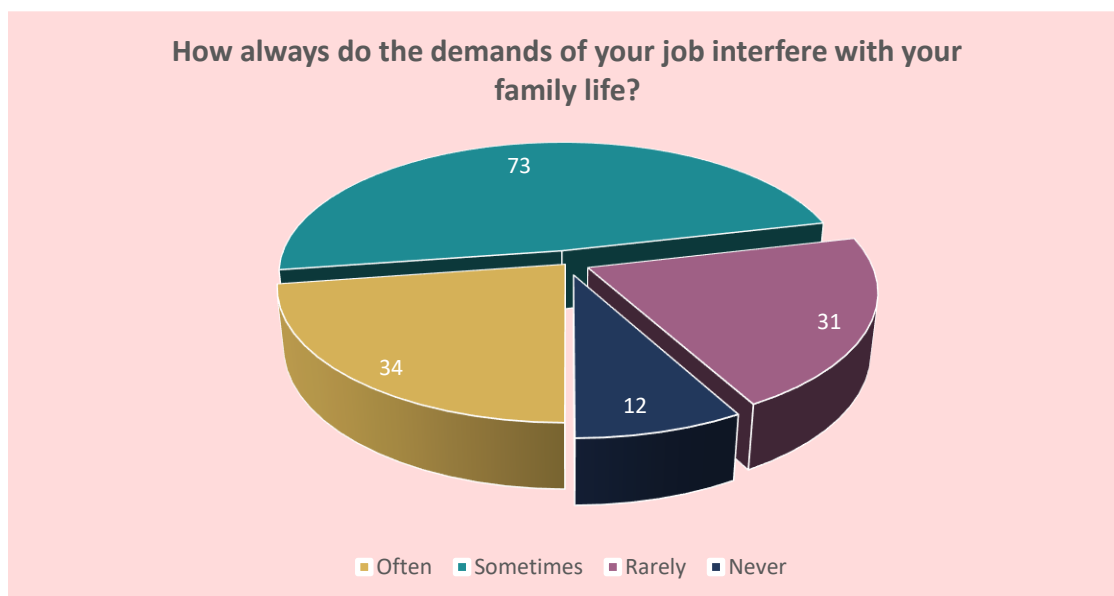

a) Often b) Sometimes c) Rarely d) Never

FREQUENCY TABLE:

Table 4.14

	Frequency	Percent	Cumulative Percent
Often	34	22.7	22.7
Sometimes	73	48.7	71.3
Rarely	31	20.7	92
Never	12	8	100
Total	150	100	

Figure 4.14

CONCLUSION:

According to the survey, among 150 respondents,

- 73(48.7%) respondent's jobs sometimes interfere with their family life.
- 34(22.7%) respondent's jobs often interfere with their family life.
- 31(20.7%) respondent's jobs rarely interfere with their family life.
- 12(8%) respondent's jobs never interfere with their family life.

15 . HAVE YOU MISSED A PERSONAL EVENT BECAUSE OF WORK?

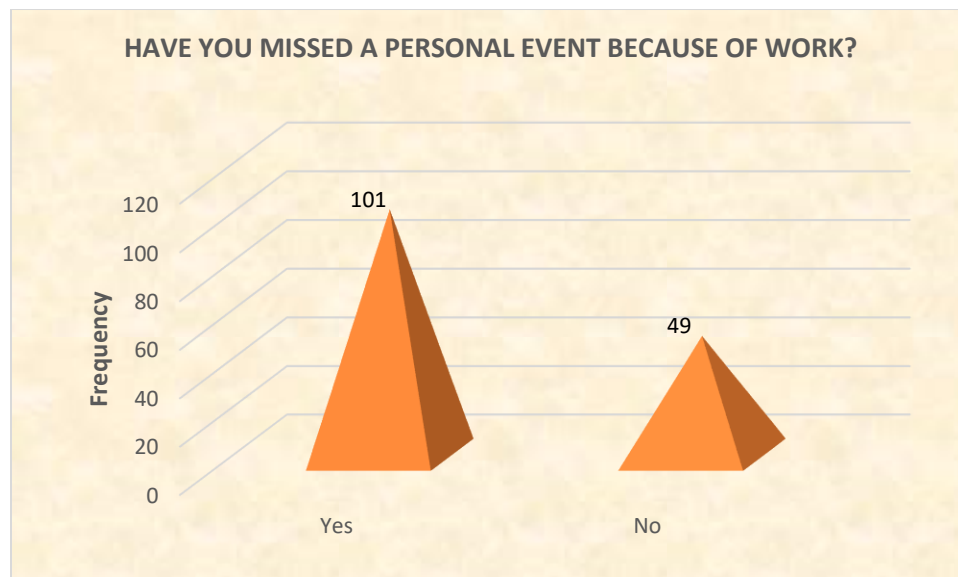

a) Yes b) No

FREQUENCY TABLE:

Table 4.15

	Frequency	Percent	Cumulative Percent
Yes	101	67.3	67.3
No	49	32.7	100
Total	150	100	

Figure 4.15

CONCLUSION:

According to the survey, among 150 respondents,

- 101(67.3%) respondents have missed their personal events because of work.
- 49(32.7%) respondents have not missed their personal events because of work.

16. WHAT ARE THE COMMON CAUSES OF WORK STRESS IN YOUR LIFE?

(Choose more than one option)

a) Working overtime b) Workload c) Daily commute d) Lack of sleep

FREQUENCY TABLE:

Table 4.16

	Yes		No	
	Frequency	Percent	Frequency	Percent
Working overtime	61	40.7	89	59.3
Workload	80	53.3	70	46.7
Daily Commute	71	47.3	79	52.7
Lack of sleep	58	38.7	92	61.3

CONCLUSION:

According to the survey, 53.3% of the population identified workload as the primary cause of work stress. The daily commute was chosen by 47.3% of respondents, while 40.7% cited working overtime as a cause of stress. Additionally, 38.7% identified lack of sleep as a common cause of work stress.

17. WHAT ARE THE CONSEQUENCES OF WORK-LIFE STRESS?

(Choose more than one option)

- a) No interest in social interaction
- b) Loss of emotional hygiene
- c) Screen fatigue
- d) Lack of personal growth

FREQUENCY TABLE:

Table 4.17

	Yes		No	
	Frequency	Percent	Frequency	Percent
No interest in social interaction	60	40	90	60
Loss of emotional hygiene	71	47.3	79	52.7
Screen fatigue	65	43.3	85	56.7
Lack of personal growth	53	35.3	97	64.7

CONCLUSION:

According to the survey, 47.3% of the population identified loss of emotional hygiene as the consequence of work-life stress, 43.3% chose screen fatigue, 40% cited no interest in social interaction, and 35.3% identified lack of personal growth.

18. WHICH FACTOR MOTIVATES YOU THE MOST IN YOUR ORGANIZATION?

(Choose more than one option)

a) Salary increase b) Promotion c) Motivational talk d) Recognition

FREQUENCY TABLE:

Table 4.18

	Yes		No	
	Frequency	Percent	Frequency	Percent
Salary increase	75	50	75	50
Promotion	65	43.3	85	56.7
Motivational talk	64	42.7	86	57.3
Recognition	67	44.7	83	55.3

CONCLUSION:

According to the survey, 50% of the population selected salary increase as the most motivating factor in their organization, 44.7% chose recognition, 43.3% opted for promotion, and 42.7% chose motivational talks.

19. DO YOU THINK THE QUALITY OF WORK LIFE OF THE ORGANIZATION HELPS TO IMPROVE YOUR PRODUCTIVITY?

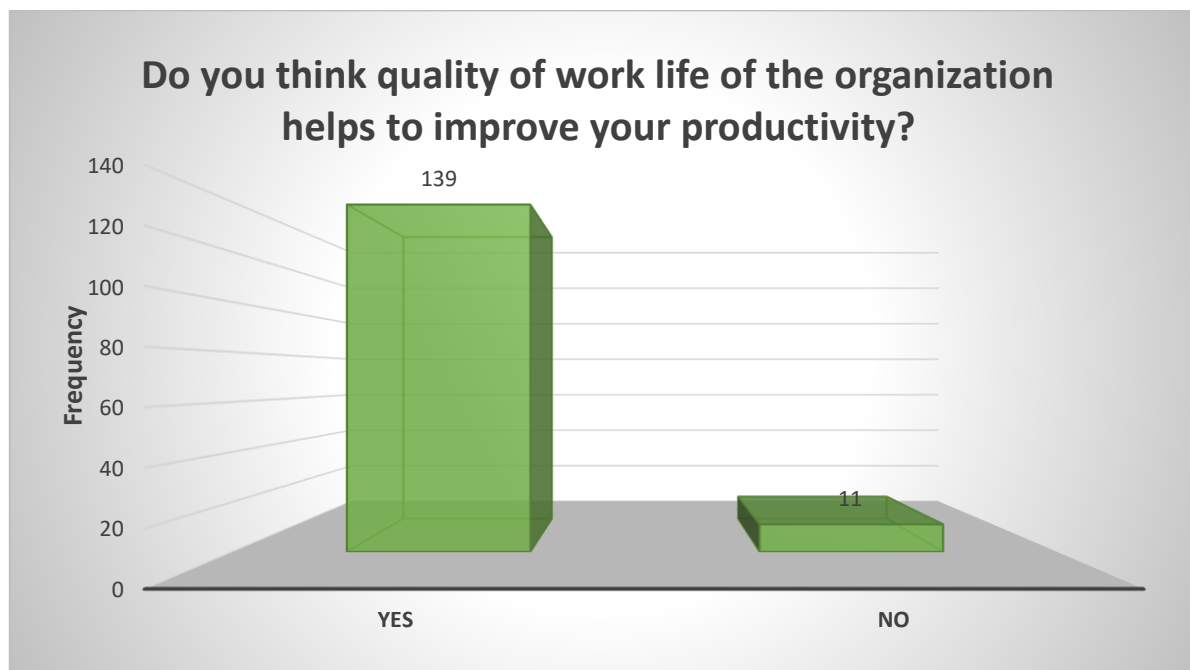

a) Yes b) No

FREQUENCY TABLE:

Table 4.19

	Frequency	Percent	Cumulative Percent
Yes	139	92.7	92.7
No	11	7.3	100
Total	150	100	

Figure 4.19

CONCLUSION:

According to the survey, among 150 respondents,

- 139 (92.7%) respondents think that the quality of work life in the organization helps to improve their productivity.
- 11 (7.3%) respondents do not think that the quality of work life in the organization helps to improve their productivity.

20. HOW CAN EMPLOYEES MANAGE THEIR WORKLOAD EFFECTIVELY?

(Choose more than one option)

- a) Prioritize tasks
- b) Allocate tasks smartly and fairly
- c) Build a timeline
- d) Avoid multitasking

FREQUENCY TABLE:

Table 4.20

	Yes		No	
	Frequency	Percent	Frequency	Percent
Prioritize tasks	79	52.7	71	47.3
Allocate tasks smartly and fairly	76	50.7	74	49.3
Build a timeline	62	41.3	88	58.7
Avoid multitasking	44	29.3	106	70.7

CONCLUSION:

According to the survey, 52.7% of the population chose prioritizing tasks, 50.7% selected allocating tasks smartly and fairly, 41.3% opted for building a timeline, and 29.3% chose avoiding multitasking.

21. HOW OFTEN DO YOU FEEL UNDER PRESSURE AT WORK?

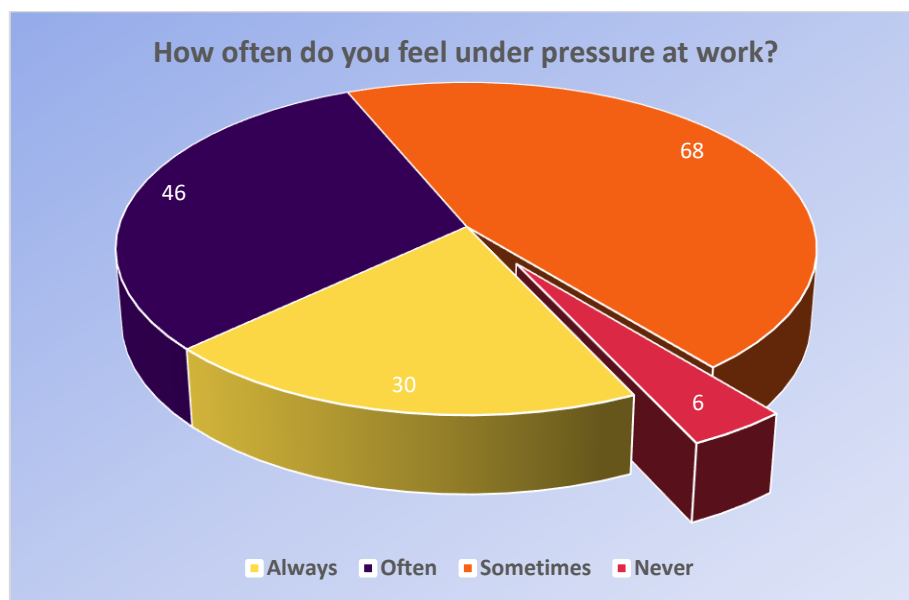

a) Always b) Often c) Sometimes d) Never

FREQUENCY TABLE:

Table 4.21

	Frequency	Percent	Cumulative Percent
Always	30	20	20
Often	46	30.7	50.7
Sometimes	68	45.3	96
Never	6	4	100
Total	150	100	

Figure 4.21

CONCLUSION:

According to the survey, among 150 respondents,

- 45.3% of the respondents sometimes feel under pressure at work.
- 30.7% of the respondents often feel under pressure at work.
- 20% of the respondents always feel under pressure at work.
- 4% of the respondents never feel under pressure at work.

22. HOW OFTEN DO YOU TAKE PART WITH OTHERS IN MAKING DECISIONS THAT AFFECT YOU?

a) Always b) Often c) Sometimes d) Never

FREQUENCY TABLE:

Table 4.22

	Frequency	Percent	Cumulative Percent
Always	31	20.7	20.7
Often	50	33.3	54
Sometimes	62	41.3	95.3
Never	7	4.7	100
Total	150	100	

Figure 4.22

CONCLUSION:

According to the survey, among 150 respondents,

- 41.3% of the respondents sometimes take part with others in making decisions that affect them.
- 33.3% of the respondents often take part with others in making decisions that affect them.
- 20.7% of the respondents always take part with others in making decisions that affect them.
- 4.7% of the respondents never take part with others in making decisions that affect them.

23. WHAT DO YOU BELIEVE IS THE BIGGEST THREAT TO YOUR WORK-LIFE BALANCE?

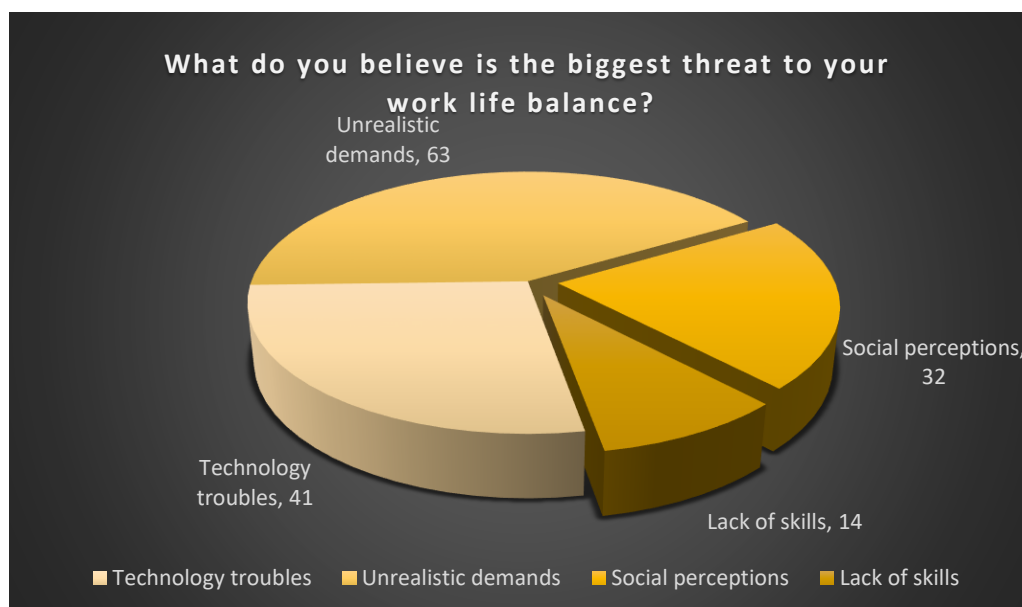

- a) Technology troubles b) Unrealistic demands
c) Social perceptions d) Lack of skills

FREQUENCY TABLE:

Table 4.23

	Frequency	Percent	Cumulative Percent
Technology troubles	41	27.3	27.3
Unrealistic demands	63	42	69.3
Social perceptions	32	21.3	90.7
Lack of skills	14	9.3	100
Total	150	100	

Figure4.23

CONCLUSION:

According to the survey, among 150 respondents,

- 42% of the respondents believe that unrealistic demands are the biggest threat to their work-life balance.
- 27.3% of the respondents believe that technology troubles are the biggest threat to their work-life balance.
- 21.3% of the respondents believe that social perceptions are the biggest threat to their work-life balance.
- 9.3% of the respondents believe that Lack of skills is the biggest threat to their work-life balance.

24. DO YOU FEEL THAT THE INCOME FROM YOUR JOB ALONE IS ENOUGH TO MEET YOUR FAMILY'S USUAL MONTHLY EXPENSES AND BILLS?

a) Yes

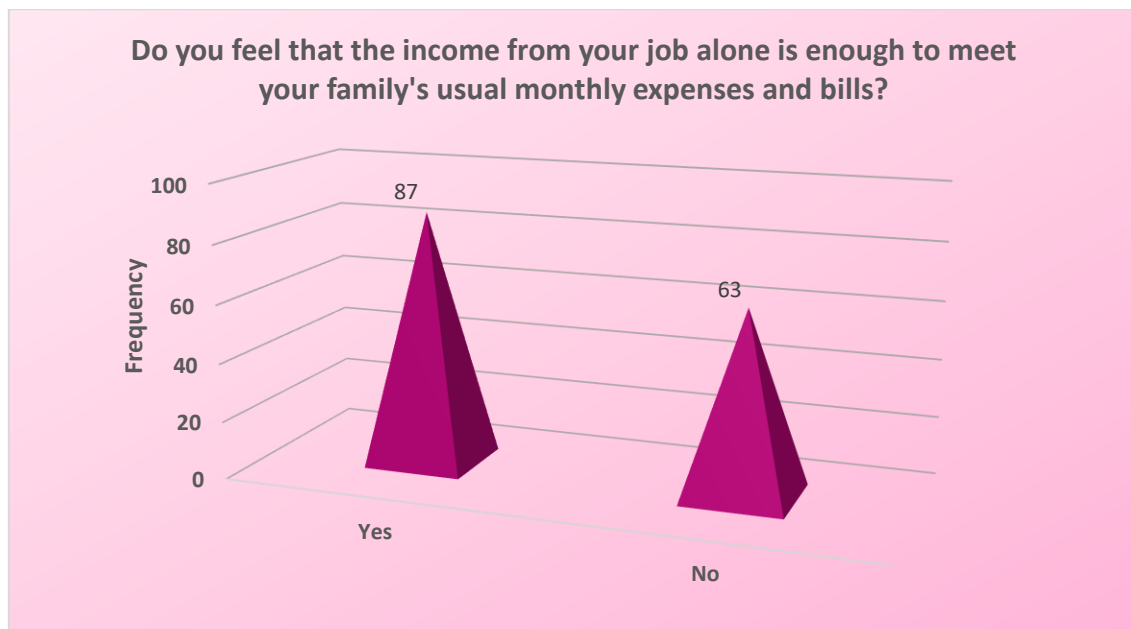

b) No

FREQUENCY TABLE:

Table 4.24

	Frequency	Percent	Cumulative Percent
Yes	87	58	58
No	63	42	100
Total	150	100	

Figure 4.24

CONCLUSION:

According to the survey, among 150 respondents,

- 87 (58%) of the respondents feel that the income from their job alone is enough to meet their family's usual monthly expenses and bills.
- 62(42%) of the respondents do not feel that the income from their job alone is enough to meet their family's usual monthly expenses and bills.

25. HOW WOULD YOU RANK THE FOLLOWING ON A SCALE OF 1-5?

(1- poor 2 - fair 3 - good 4 -Very Good 5 - excellent)

a) Your work environment is positive and supportive	
b) Job suit my educational qualification	
c) You have access to stress management programs at your current workplace	
d)The training opportunities have helped in improving the quality of work	
e) I work a manageable number of hours	

Table 4.25

Rank	1	2	3	4	5
A	43	13	41	21	32
B	33	48	21	31	18
C	39	36	46	14	15
D	15	25	24	50	35
E	20	28	18	34	50
Total	150	150	150	150	150

FREQUENCY TABLE:

Table 4.25

Options		Total
E	$(1*20)+(2*28)+(3*18)+(4*34)+(5*50)$	516
D	$(1*15)+(2*25)+(3*24)+(4*50)+(5*35)$	512
A	$(1*43)+(2*13)+(3*41)+(4*21)+(5*32)$	436
B	$(1*33)+(2*48)+(3*21)+(4*31)+(5*18)$	406
C	$(1*39)+(2*36)+(3*46)+(4*14)+(5*15)$	380

CONCLUSION:

The total highest score indicates the first preference ranking. The results indicate the following rank ordering:

1. I work a manageable number of hours (**E**)
2. The training opportunities have helped in improving the quality of work (**D**)
3. Your work environment is positive and supportive (**A**)
4. Job suit my educational qualification (**B**)
5. You have access to stress management programs at your current workplace (**C**)

a) Never b) About once a week

c) More than once a week d) Worker works mainly at home

Table 4.26

	Frequency	Percent	Cumulative Percent
Never	56	37.3	37.3
About once a week	36	24	61.3
More than once a week	44	29.3	90.7
The worker works mainly at home	14	9.3	100
Total	150	100	

HOW OFTEN DO YOU WORK AT HOME AS PART OF YOUR JOB?

A 3D pie chart with four slices. The largest slice is red, labeled 'Never, 56'. The next largest is dark blue, labeled 'More than once a week, 44'. The smallest slice is light blue, labeled 'About once a week, 36'. The fourth slice is teal, labeled 'Worker works mainly at home, 14'.

Frequency	Percentage
Never	56
About once a week	36
More than once a week	44
Worker works mainly at home	14

According to the survey, among 150 respondents,

- 56(37.3%) of the respondents never work at home as part of their job.
- 44(29.3%) of the respondents work at home as part of their job more than once a week.
- 36(24%) of the respondents work at home as part of their job about once a week.
- 14(9.3%) of the respondents mainly work at home as part of their job.

27. MY ORGANIZATION PROVIDES ME WITH HEALTH BENEFITS.

a) Yes

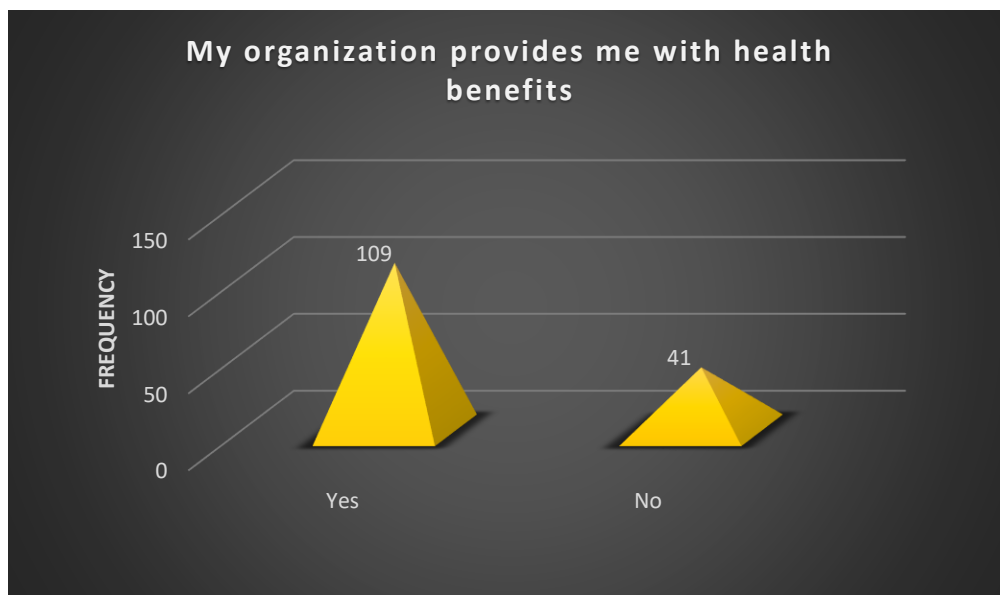

b) No

FREQUENCY TABLE:

Table 4.27

	Frequency	Percent	Cumulative Percent
Yes	109	72.7	72.7
No	41	27.3	100
Total	150	100	

Figure 4.27

CONCLUSION:

According to the survey, among 150 respondents,

- 109 (72.7%) of the respondents declared that their organization provides them with health benefits.
- 41(27.3%) of the respondent declared that their organization does not provide them with health benefits.

28. HOW SATISFIED WOULD YOU SAY YOU ARE WITH YOUR JOB?

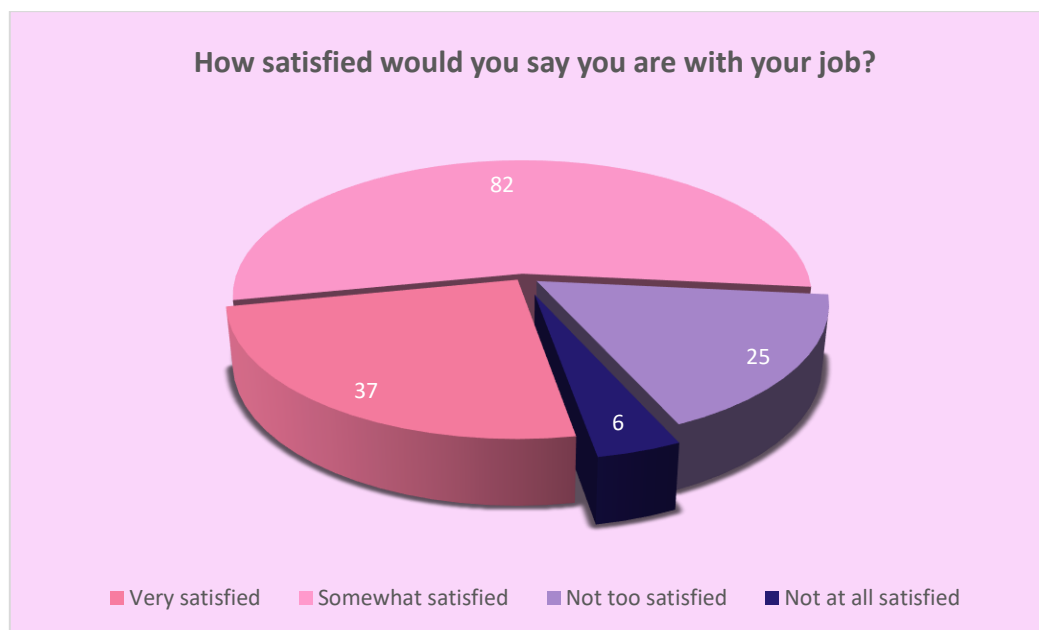

- a) Very satisfied
- b) Somewhat satisfied
- c) Not too satisfied
- d) Not at all satisfied

FREQUENCY TABLE:

Table 4.28

	Frequency	Percent	Cumulative Percent
Very satisfied	37	24.7	24.7
Somewhat satisfied	82	54.7	79.3
Not too satisfied	25	16.7	96
Not at all satisfied	6	4	100
Total	150	100	

Figure 4.28

CONCLUSION:

According to the survey, among 150 respondents,

- 82(54.7%) of the respondents are somewhat satisfied with their job.
- 37(24.7%) of the respondents are very satisfied with their job.
- 25(16.7%) of the respondents are not too satisfied with their job.
- 6(4%) of the respondents are not at all satisfied with their job.

**29. WHAT IS JOB SATISFACTION ACCORDING TO YOU?
(RANK FROM 1-4)**

(1- poor 2 - fair 3 - good 4 - excellent)

Learning and career development	
Job security	
Attractive fixed salary	
Appreciation for your work	

Table 4.29

RANK	1	2	3	4
A	43	24	41	43
B	29	66	37	18
C	49	36	44	21
D	29	24	28	68
TOTAL	150	150	150	150

FREQUENCY TABLE:

Table 4.29

OPTIONS		TOTALS
D	$(29*1)+(24*2)+(28*3)+(68*4)$	433
A	$(43*1)+(24*2)+(41*3)+(43*4)$	386
B	$(29*1)+(66*2)+(37*3)+(18*4)$	344
C	$(49*1)+(36*2)+(44*3)+(21*4)$	337

CONCLUSION:

The total highest score indicates the first preference ranking. The results indicate the following rank ordering:

1. Appreciation for your work **(D)**
2. Learning and career development **(A)**
3. Job security **(B)**
4. Attractive fixed salary **(C)**

30. DO YOU THINK THAT EMPLOYEES IN YOUR ORGANIZATION ARE SKILLED, MOTIVATED, AND PRODUCTIVE?

a) Yes b) No

FREQUENCY TABLE:

Table 4.30

	Frequency	Percent	Cumulative Percent
Yes	123	82	82
No	27	18	100
Total	150	100	

Figure 4.30

CONCLUSION:

According to the survey, among 150 respondents,

- 123(82%) respondents think that employees in their organization are skilled, motivated, and productive.
- 27(18%) respondents think that employees in their organization are not skilled, motivated, and productive.

31. PLEASE INDICATE HOW MUCH YOU AGREE OR DISAGREE WITH THE FOLLOWING STATEMENTS.

	Strongly Agree (5)	Agree (4)	Neutral (3)	Disagree (2)	Strongly Disagree (1)
a) The safety and health conditions where I work are good					
b) My job requires that I keep learning new things					
c) My job lets me use my skills and abilities					
d) Promotions are handled fairly					
e) My supervisor treats me fairly					
f) Work Load is less as compared to other companies					
g) My employer provides adequate facilities and flexibility for me to fit work around my family life.					

Table 4.31

Statements	Mean	Std. Deviation	N
The safety and health conditions where I work are good	3.63	1.162	150
My job requires that I keep learning new things	3.76	0.981	150
My job lets me use my skills and abilities	3.51	1.11	150
Promotions are handled fairly	3.37	1.096	150
My supervisor treats me fairly	3.39	1.269	150
Work Load is less as compared to other companies	3.25	1.222	150
My employer provides adequate facilities and flexibility for me to fit work around my family life	3.31	1.117	150

CONCLUSION:

From the above table, it is observed that

- **Most of the respondents agreed that:**

1. My job requires that I keep learning new things. (mean =3.76)
2. The safety and health conditions where I work are good. (mean =3.63)
3. My job lets me use my skills and abilities. (mean =3.51)
4. My supervisor treats me fairly. (mean =3.39)
5. Promotions are handled fairly. (mean =3.37)
6. My employer provides adequate facilities and flexibility for me to fit work around my family life. (mean =3.31)

- **Most of the respondents disagreed that:**

1. Work Load is less as compared to other companies. (mean =3.25)

CHAPTER-5

STATISTICAL ANALYSIS-II

1)AGE GROUP * DO THE DEMANDS OF YOUR JOB INTERFERE WITH YOUR FAMILY LIFE?

Null Hypothesis(H₀): There is no association between age group and preference on how the demands of your job interfere with your family life.

Alternative Hypothesis(H₁): There is an association between age group and preference on how the demands of your job interfere with your family life.

GENDER * How always do the demands of your job interfere with your family life?								
Crosstabulation								
			How always do the demands of your job interfere with your family life?				Total	
			Often	Sometimes	Rarely	Never		
GENDER	MALE	Count	18	38	17	8	81	
		Expected Count	18.4	39.4	16.7	6.5	81.0	
	FEMALE	Count	16	35	14	4	69	
		Expected Count	15.6	33.6	14.3	5.5	69.0	
	Total		Count	34	73	31	12	150
			Expected Count	34.0	73.0	31.0	12.0	150.0

Chi-Square Tests			
	Value	Df	Asymptotic Significance (2-sided)
Pearson Chi-Square	.910 ^a	3	0.823
Likelihood Ratio	0.930	3	0.818
Linear-by-Linear Association	0.487	1	0.485
N of Valid Cases	150		

Conclusion:

Since the P value (0.823) > significant value (0.05), we accept H₀ and hence conclude that there is no association between age group and preference on how the demands of your job interfere with your family life.

2) GENDER * WHICH OF THE FOLLOWING BEST DESCRIBES YOUR USUAL WORK SCHEDULE?

Null Hypothesis(H_0): There is no association between the age group and the employee's usual work schedule.

Alternative Hypothesis(H_1): There is an association between age group employees' usual work schedule.

GENDER * Which of the following best describes your usual work schedule? Crosstabulation							
			Which of the following best describes your usual work schedule?				Total
			Day shift	Night shift	Split shift	Irregular shift	
GENDER	MALE	Count	45	16	14	6	81
		Expected Count	46.4	17.8	11.3	5.4	81.0
	FEMALE	Count	41	17	7	4	69
		Expected Count	39.6	15.2	9.7	4.6	69.0
Total		Count	86	33	21	10	150
		Expected Count	86.0	33.0	21.0	10.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	2.002 ^a	3	0.572
Likelihood Ratio	2.037	3	0.565
Linear-by-Linear Association	0.841	1	0.359
N of Valid Cases	150		

Conclusion:

Since the P value (0.572) > significant value (0.05), we accept H_0 and hence conclude that there is no association between the age group and the employees' usual work schedule.

3) EDUCATION LEVEL * HOW SATISFIED WOULD YOU SAY YOU ARE WITH YOUR JOB?

Null Hypothesis(H₀): There is no association between educational level and satisfaction of an employee with his/her job.

Alternative Hypothesis(H₁): There is an association between educational level and the satisfaction of employees with his/her job.

EDUCATION LEVEL * How satisfied would you say you are with your job? Crosstabulation							
			How satisfied would you say you are with your job?				Total
			Very satisfied	Somewhat satisfied	Not too satisfied	Not at all satisfied	
EDUCATION LEVEL	INTERMEDIATE	Count	10	5	0	0	15
		Expected Count	3.7	8.2	2.5	0.6	15.0
	GRADUATION	Count	16	40	12	1	69
		Expected Count	17.0	37.7	11.5	2.8	69.0
	POST GRADUATION	Count	7	35	11	4	57
		Expected Count	14.1	31.2	9.5	2.3	57.0
	OTHERS	Count	4	2	2	1	9
		Expected Count	2.2	4.9	1.5	0.4	9.0
Total		Count	37	82	25	6	150
		Expected Count	37.0	82.0	25.0	6.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	26.436 ^a	9	0.002
Likelihood Ratio	27.043	9	0.001
Linear-by-Linear Association	9.983	1	0.002
N of Valid Cases	150		

Conclusion:

Since the P value (0.002) < significant value (0.05), we reject H₀ and conclude that there is an association between educational level and satisfaction of employees with his/her job.

$$C = \sqrt{\frac{\chi^2}{\chi^2 + N}} = 0.3870, \text{ there is a 38.70\% association.}$$

4) OCCUPATIONAL SECTOR * MY ORGANIZATION PROVIDES ME WITH HEALTH BENEFITS.

Null Hypothesis(H₀): There is no association between the occupational sector and health benefits provided by the organization.

Alternative Hypothesis(H₁): There is an association between the occupational sector and health benefits provided by the organization.

OCCUPATIONAL SECTOR * My organization provides me with health benefits. Crosstabulation					
			My organization provides me with health benefits.		Total
			Yes	No	
OCCUPATIONAL SECTOR	GOVERNMENT	Count	31	4	35
		Expected Count	25.4	9.6	35.0
	PRIVATE	Count	62	24	86
		Expected Count	62.5	23.5	86.0
	BUSINESS	Count	10	7	17
		Expected Count	12.4	4.6	17.0
	OTHERS	Count	6	6	12
		Expected Count	8.7	3.3	12.0
Total		Count	109	41	150
		Expected Count	109.0	41.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	9.216 ^a	3	0.027
Likelihood Ratio	9.580	3	0.022
Linear-by-Linear Association	8.948	1	0.003
N of Valid Cases	150		

Conclusion:

Since the P value (0.027) < significant value (0.05), we reject H₀ and hence conclude that there is an association between the occupational sector and health benefits provided by the organization.

$$C = \sqrt{\frac{\chi^2}{\chi^2 + N}} = 0.2406, \text{ there is a 24.06\% association.}$$

5) ANNUAL INCOME * HOW SATISFIED WOULD YOU SAY YOU ARE WITH YOUR JOB?

Null Hypothesis(H_0): There is no association between annual income and satisfaction with the job.

Alternative Hypothesis(H_1): There is an association between annual income and satisfaction with the job.

ANNUAL INCOME * How satisfied would you say you are with your job? Crosstabulation							
			How satisfied would you say you are with your job?				Total
			Very satisfied	Somewhat satisfied	Not too satisfied	Not at all satisfied	
ANNUAL INCOME	LESS THAN Rs.300000	Count	15	18	2	3	38
		Expected Count	9.4	20.8	6.3	1.5	38.0
	Rs.300000 TO Rs. 500000	Count	7	28	6	0	41
		Expected Count	10.1	22.4	6.8	1.6	41.0
	Rs.500000 TO Rs. 1000000	Count	8	26	12	2	48
		Expected Count	11.8	26.2	8.0	1.9	48.0
	GREATER THAN Rs.1000000	Count	7	10	5	1	23
		Expected Count	5.7	12.6	3.8	0.9	23.0
Total		Count	37	82	25	6	150
		Expected Count	37.0	82.0	25.0	6.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	16.696 ^a	9	0.054
Likelihood Ratio	18.496	9	0.030
Linear-by-Linear Association	2.481	1	0.115
N of Valid Cases	150		

Conclusion:

Since the P value (0.054) > significant value (0.05), we accept H_0 and hence conclude that there is no association between annual income and satisfaction with the job.

6) NUMBER OF WORKING HOURS * HOW SATISFIED ARE YOU WITH YOUR CURRENT WORKING HOURS?

Null Hypothesis(H₀): There is no association between number of working hours and satisfaction with current working hours.

Alternative Hypothesis(H₁): There is an association between number of working hours and satisfaction with current working hours.

NUMBER OF WORKING HOURS * How satisfied are you with your current working hours? Crosstabulation							
			How satisfied are you with your current working hours?				Total
			Very satisfied	Somewhat satisfied	Not too satisfied	Not at all satisfied	
NUMBER OF WORKING HOURS	LESS THAN 6 HOURS	Count	8	5	4	3	20
		Expected Count	5.7	9.1	3.7	1.5	20.0
	6 TO 10 HOURS	Count	31	54	17	2	104
		Expected Count	29.8	47.1	19.4	7.6	104.0
	MORE THAN 10 HOURS	Count	4	9	7	6	26
		Expected Count	7.5	11.8	4.9	1.9	26.0
Total		Count	43	68	28	11	150
		Expected Count	43.0	68.0	28.0	11.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	21.833 ^a	6	0.001
Likelihood Ratio	20.485	6	0.002
Linear-by-Linear Association	4.594	1	0.032
N of Valid Cases	150		

Conclusion: Since the P value(0.001) < significant value (0.05), we reject H₀ and hence conclude that there is an association between number of working hours and satisfaction with current working hours.

$$C = \sqrt{\frac{\chi^2}{\chi^2 + N}} = 0.3564, \text{ there is a 35.64\% association}$$

7) NUMBER OF WORKING HOURS * HOW MUCH DO YOU WORK OVERTIME?

Null Hypothesis(H₀): There is no association between the number of working hours and the period of working overtime.

Alternative Hypothesis(H₁): There is an association between the number of working hours and the period of working overtime.

NUMBER OF WORKING HOURS * How much do you work overtime? Crosstabulation						
			How much do you work overtime?			Total
			1 Hour	2 to 3 hours	More than 3 hours	
NUMBER OF WORKING HOURS	LESS THAN 6 HOURS	Count	13	5	2	20
		Expected Count	7.2	9.7	3.1	20.0
	6 TO 10 HOURS	Count	36	54	14	104
		Expected Count	37.4	50.6	15.9	104.0
	MORE THAN 10 HOURS	Count	5	14	7	26
		Expected Count	9.4	12.7	4.0	26.0
Total		Count	54	73	23	150
		Expected Count	54.0	73.0	23.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	12.317 ^a	4	0.015
Likelihood Ratio	11.961	4	0.018
Linear-by-Linear Association	9.353	1	0.002
N of Valid Cases	150		

Conclusion: Since the P value (0.015) < significant value (0.05), we reject H₀ and hence conclude that there is an association between the number of working hours and the period of working overtime.

$$C = \sqrt{\frac{\chi^2}{\chi^2 + N}} = 0.2754, \text{ there is a 27.54\% association.}$$

8) NUMBER OF WORKING HOURS * AFTER AN AVERAGE WORK DAY, ABOUT HOW MANY HOURS DO YOU HAVE TO RELAX OR PURSUE ACTIVITIES THAT YOU ENJOY?

Null Hypothesis(H₀): There is no association between the number of working hours and the time you have to relax or pursue activities that you enjoy.

Alternative Hypothesis(H₁): There is an association between the number of working hours and the time you have to relax or pursue activities that you enjoy.

NUMBER OF WORKING HOURS * After an average work day, how many hours do you have to relax or pursue activities that you enjoy? Crosstabulation						
			After an average work day, how many hours do you have to relax or pursue activities that you enjoy?			Total
			Less than 1 hour	2 to 3 hours	More than 3 hours	
NUMBER OF WORKING HOURS	LESS THAN 6 HOURS	Count	10	4	6	20
		Expected Count	7.6	9.1	3.3	20.0
	6 TO 10 HOURS	Count	38	52	14	104
		Expected Count	39.5	47.1	17.3	104.0
	MORE THAN 10 HOURS	Count	9	12	5	26
		Expected Count	9.9	11.8	4.3	26.0
Total		Count	57	68	25	150
		Expected Count	57.0	68.0	25.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	7.107 ^a	4	0.130
Likelihood Ratio	7.407	4	0.116
Linear-by-Linear Association	0.071	1	0.790
N of Valid Cases	150		

Conclusion: Since the P value (0.130) > significant value (0.05), we accept H₀ and hence conclude that there is no association between the number of working hours and the time you have to relax or pursue activities that you enjoy.

9) NUMBER OF WORKING HOURS * HOW OFTEN DO YOU FEEL UNDER PRESSURE AT WORK?

Null Hypothesis(H₀): There is no association between the number of working hours and how often you feel under pressure.

Alternative Hypothesis(H₁): There is an association between the number of working hours and how often you feel under pressure

NUMBER OF WORKING HOURS * How often do you feel under pressure at work? Crosstabulation							
			How often do you feel under pressure at work?				Total
			Always	Often	Sometimes	Never	
NUMBER OF WORKING HOURS	LESS THAN 6 HOURS	Count	9	6	5	0	20
		Expected Count	4.0	6.1	9.1	0.8	20.0
	6 TO 10 HOURS	Count	14	28	57	5	104
		Expected Count	20.8	31.9	47.1	4.2	104.0
	MORE THAN 10 HOURS	Count	7	12	6	1	26
		Expected Count	5.2	8.0	11.8	1.0	26.0
Total		Count	30	46	68	6	150
		Expected Count	30.0	46.0	68.0	6.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance (2-sided)
Pearson Chi-Square	19.303 ^a	6	0.004
Likelihood Ratio	19.272	6	0.004
Linear-by-Linear Association	0.278	1	0.598
N of Valid Cases	150		

Conclusion:

Since the P value (0.004) > significant value (0.05), we reject H₀ and hence conclude that there is an association between number of working hours and how often you feel under pressure.

$$C = \sqrt{\frac{\chi^2}{\chi^2 + N}} = 0.3376, \text{ there is a 33.76\% association.}$$

10) WHICH OF THE FOLLOWING BEST DESCRIBES YOUR USUAL WORK SCHEDULE? *HOW MANY HOURS DO YOU SLEEP ON AN AVERAGE WORK NIGHT?

Null Hypothesis(H₀): There is no association between the type of usual work schedule and the number of hours of sleep on an average work night.

Alternative Hypothesis(H₁): There is an association between the type of usual work schedule and the number of hours of sleep on an average work night.

Which of the following best describes your usual work schedule? * How many hours do you sleep on an average work night? Crosstabulation						
			How many hours do you sleep on an average work night?			
				4 to 6 hours	More than 6 hours	
			Less than 4 hours	4 to 6 hours	More than 6 hours	Total
Which of the following best describes your usual work schedule?	Day shift	Count	12	30	44	86
		Expected Count	14.3	35.0	36.7	86.0
	Night shift	Count	7	15	11	33
		Expected Count	5.5	13.4	14.1	33.0
	Split shift	Count	5	9	7	21
		Expected Count	3.5	8.5	9.0	21.0
	Irregular shift	Count	1	7	2	10
		Expected Count	1.7	4.1	4.3	10.0
Total		Count	25	61	64	150
		Expected Count	25.0	61.0	64.0	150.0

Chi-Square Tests			
	Value	df	Asymptotic Significance
Pearson Chi-Square	8.494 ^a	6	0.204
Likelihood Ratio	8.403	6	0.210
Linear-by-Linear Association	3.760	1	0.052
N of Valid Cases	150		

Conclusion: Since the P value (0.204) > significant value (0.05), we accept H₀ and hence conclude that there is no association between the type of usual work schedule and the number of hours of sleep on an average work night.

CHAPTER-6

INFERENCES

CHAPTER 6: INFERENCES

- 62(41.334%) respondents are under age group 18-25; 45(30%) respondents are under the age group 25-40; 36(24%) respondents are under the age group 40 & above; 7(4.666%) respondents are under 18.
- 81(54%) respondents are male; 69(46%) respondents are female.
- 69 (46.0%) respondents' education level is graduation; 57(38.0%) respondents' education level is post-graduation; 15(10.0%) respondent's education level is intermediate; 9 (6.0%) respondents education level is other than intermediate, graduation, and post-graduation.
- 86 (57.3%) respondents are private employees; 35 (23.3%) respondents are government employees; 17(11.3%) respondents are business professionals; 12(8%) respondents are from other sectors.
- 48 (34%) respondents annual income is between Rs.500000 to Rs. 1000000; 41 (34%) respondents annual income is between Rs.300000 to Rs. 500000; 38 (34%) respondents annual income is less than Rs.300000; 23 (34%) respondents annual income is greater than Rs.1000000.
- 104 (69.3%) respondents working hours are between 6 to 10 hours; 20(13.3%) respondents working hours are less than 6 hours; 26(17.3%) respondents working hours are more than 10 hours.
- 68(45.33%) respondents are somewhat satisfied with their current working hours; 43(28.66) respondents are very satisfied with their current working hours; 28(18.66) respondents are not too satisfied with their current working hours; 11(7.33%) respondents are not at all satisfied with their current working hours.
- 75 (50.0%) respondents daily commute is between 1 to 2 hours; 38 (25.3%) respondents daily commute is less than 1 hour; 37 (24.7%) respondents' daily commute is more than 2 hours.
- 68 (45.3%) respondents have been working in the present organization for less than one year; 45 (30%) respondents have been working in the present organization for approximately 1 to 5 years; 37 (24.7%) respondents have been working in the present organization for more than 5 years
- 86 (57.3%) respondents have day shift as their usual work schedule; 33 (22%) respondents have the night shift as their usual work schedule; 21 (14%) respondents have split shifts as their usual work schedule; 10 (6.7%) respondents have irregular shifts as their usual work schedule.
- 73 (48.7%) respondents work 2 to 3 hours of overtime; 54 (36%) respondents work 1 hour of overtime; 23 (15.3%) respondents work more than 3 hours of overtime.

- 64 (42.7%) respondents sleep more than 6 hours on an average work night; 61 (40.7%) respondents sleep 4 to 6 hours on an average work night; 25 (16.7%) respondents sleep less than 4 hours on an average work night.
- 68(45.3%) respondents have 2 to 3 hours to relax or pursue activities; 57(38%) respondents have less than 1 hour to relax or pursue activities; 25(16.7%) respondents have more than 3 hours to relax or pursue activities.
- 73(48.7%) respondent's jobs sometimes interfere with their family life; 34(22.7%) respondent's jobs often interfere with their family life; 31(20.7%) respondent's jobs rarely interfere with their family life; 12(8%) respondent's jobs never interfere with their family life.
- 101(67.3%) respondents have missed their personal events because of work; 49(32.7%) respondents have not missed their personal events because of work.
- 53.3% of the population identified workload as the primary cause of work stress. The daily commute was chosen by 47.3% of respondents, while 40.7% cited working overtime as a cause of stress. Additionally, 38.7% identified lack of sleep as a common cause of work stress.
- 47.3% of the population identified loss of emotional hygiene as the consequence of work-life stress, 43.3% chose screen fatigue, 40% cited no interest in social interaction, and 35.3% identified a lack of personal growth.
- 50% of the population selected salary increase as the most motivating factor in their organization, 44.7% chose recognition, 43.3% opted for promotion, and 42.7% chose motivational talks.
- 139 (92.7%) respondents think that the quality of work life in the organization helps to improve their productivity; 11 (7.3%) respondents do not think that the quality of work life in the organization helps to improve their productivity.
- 52.7% of the population chose prioritizing tasks, 50.7% selected allocating tasks smartly and fairly, 41.3% opted for building a timeline, and 29.3% chose avoiding multitasking.
- 45.3% of the respondents sometimes feel under pressure at work.
30.7% of the respondents often feel under pressure at work; 20% of the respondents always feel under pressure at work; and 4% of the respondents never feel under pressure at work.
- 41.3% of the respondents sometimes take part with others in making decisions that affect them; 33.3% of the respondents often take part with others in making decisions that affect them; 20.7% of the respondents always take part with others in making decisions that affect them; 4.7% of the respondents never take part with others in making decisions that affect them.

- 42% of the respondents believe that unrealistic demands are the biggest threat to their work-life balance; 27.3% of the respondents believe that technology troubles are the biggest threat to their work-life balance; 21.3% of the respondents believe that social perceptions are the biggest threat to their work-life balance; 9.3% of the respondents believe that Lack of skills is the biggest threat to their work-life balance.
- 87 (58%) of the respondents feel that the income from their job alone is enough to meet their family's usual monthly expenses and bills; 62(42%) of the respondents do not feel that the income from their job alone is enough to meet their family's usual monthly expenses and bills.
- The most preferred category was ranked in the following orders:
 1. I work a manageable number of hours
 2. The training opportunities have helped in improving the quality of work
 3. Your work environment is positive and supportive
 4. Job suit my educational qualification
 5. You have access to stress management programs at your current workplace
- 56(37.3%) of the respondents never work at home as part of their job.; 44(29.3%) of the respondents work at home as part of their job more than once a week; 36(24%) of the respondents work at home as part of their job about once a week; 14(9.3%) of the respondents mainly work at home as part of their job.
- 109 (72.7%) of the respondents declared that their organization provides them with health benefits; 41(27.3%) of the respondents declared that their organization does not provide them with health benefits.
- 82(54.7%) of the respondents are somewhat satisfied with their job; 37(24.7%) of the respondents are very satisfied with their job; 25(16.7%) of the respondents are not too satisfied with their job; 6(4%) of the respondents are not at all satisfied with their job.
- The most preferred category was ranked in the following orders:
 1. Appreciation for your work
 2. Learning and career development
 3. Job security
 4. Attractive fixed salary
- 123(82%) respondents think that employees in their organization are skilled, motivated, and productive; 27(18%) respondents think that employees in their organization are not skilled, motivated, and productive.

- According to the table

Most of the respondents agreed that:

- My job requires that I keep learning new things. (mean =3.76)
- The safety and health conditions where I work are good. (mean =3.63)
- My job lets me use my skills and abilities. (mean =3.51)
- My supervisor treats me fairly. (mean =3.39)
- Promotions are handled fairly. (mean =3.37)
- My employer provides adequate facilities and flexibility for me to fit work around my family life. (mean =3.31)

• Most of the respondents disagreed that:

- Work Load is less as compared to other companies. (mean =3.25)

CHI-SQUARE RESULTS:

- There is no association between age group and preference on how the demands of your job interfere with your family life.
- There is no association between age group and employees' usual work schedule.
- There is a 38.70% association between educational level and satisfaction of employees with his/her job.
- There is a 24.06% association between the occupational sector and health benefits provided by the organization.
- There is no association between annual income and satisfaction with the job.
- There is a 35.64% association between number of working hours and satisfaction with current working hours.
- There is a 27.54% association between the number of working hours and the period of working overtime.
- There is no association between the number of working hours and the time you have to relax or pursue activities that you enjoy.
- There is a 33.76% association between the number of working hours and how often you feel under pressure.
- There is no association between the type of usual work schedule and the number of hours of sleep on an average work night.

NULL HYPOTHESIS:

1) AGE GROUP ALWAYS DO THE DEMANDS OF YOUR JOB INTERFERE WITH YOUR FAMILY LIFE?

Null Hypothesis(H_0): There is no association between age group and preference on how the demands of your job interfere with your family life.

2) GENDER * WHICH OF THE FOLLOWING BEST DESCRIBES YOUR USUAL WORK SCHEDULE?

Null Hypothesis(H_0): There is no association between age group and employee's usual work schedule.

3) EDUCATION LEVEL * HOW SATISFIED WOULD YOU SAY YOU ARE WITH YOUR JOB? CROSSTABULATION

Null Hypothesis(H_0): There is no association between educational level and satisfaction of an employee with his/her job.

4) OCCUPATIONAL SECTOR * MY ORGANIZATION PROVIDES ME WITH HEALTH BENEFITS. CROSSTABULATION

Null Hypothesis(H_0): There is no association between the occupational sector and health benefits provided by the organization.

5) ANNUAL INCOME * HOW SATISFIED WOULD YOU SAY YOU ARE WITH YOUR JOB? CROSSTABULATION

Null Hypothesis(H_0): There is no association between annual income and satisfaction with the job.

6) NUMBER OF WORKING HOURS * HOW SATISFIED ARE YOU WITH YOUR CURRENT WORKING HOURS? CROSSTABULATION

Null Hypothesis(H_0): There is no association between number of working hours and satisfaction with current working hours.

7) NUMBER OF WORKING HOURS * HOW MUCH DO YOU WORK OVERTIME? CROSSTABULATION

Null Hypothesis(H_0): There is no association between the number of working hours and the period of working overtime.

8) NUMBER OF WORKING HOURS * AFTER AN AVERAGE WORK DAY, ABOUT HOW MANY HOURS DO YOU HAVE TO RELAX OR PURSUE ACTIVITIES THAT YOU ENJOY?

Null Hypothesis(H_0): There is no association between the number of working hours and the time you have to relax or pursue activities that you enjoy.

9) NUMBER OF WORKING HOURS * HOW OFTEN DO YOU FEEL UNDER PRESSURE AT WORK?

Null Hypothesis(H_0): There is no association between the number of working hours and how often you feel under pressure.

10) WHICH OF THE FOLLOWING BEST DESCRIBES YOUR USUAL WORK SCHEDULE? * HOW MANY HOURS DO YOU SLEEP ON AN AVERAGE WORK NIGHT? CROSSTABULATION

Null Hypothesis(H_0): There is no association between the type of usual work schedule and the number of hours of sleep on an average work night.

CHAPTER-7

PROJECT REPORT

CHAPTER 7: PROJECT REPORT

- It can be concluded from the response that 53.7% of the respondents are private employees.
- Majority of the respondents work between 6-10 hours and most of them are somewhat satisfied with their working hours.
- From the study, it can be observed that the common causes of work stress are majorly working overtime and workload.
- It can be evident from the study that only 58% of the respondents are able to meet their family usual monthly's expenses and bills with their incomes.
- Educational level and job satisfaction are positively associated.
- 57% of the respondents have less than 1 hour to relax or pursue activities after an average work day.
- It can be concluded that 47.3% of the respondents have lost emotional hygiene as a consequence of work-life stress.
- There is a 24.06% association between the occupational sector and health benefits provided by the organization.
- Number of working hours and current working hours satisfaction are positively associated.
- From the survey, it can be concluded that the majority of the respondents agree that prioritizing tasks can be the reason to manage their workload effectively for task organization and select allocating tasks smartly and fairly for efficient distribution.
- 42% of the respondents say that unrealistic demands are the biggest threat to their work-life balance.
- According to the survey, 50% of the population selected salary increase as the most motivating factor in their organization due to financial incentives, and 44.7% chose recognition due to acknowledgment of their efforts.
- It can be concluded that appreciation for your work, learning, and career development gives job satisfaction to the majority of the respondents.
- 82% of the responses say that employees in their organization are skilled, motivated, and productive.
- From the survey, half of the respondents need 1 to 2 hours for their daily commute.
- 67.3% of the respondents have missed personal events due to work.
- Majority of the respondents say that the quality of the work life of the organization improves the productivity of the employees.
- According to the survey, there is an association between number of working hours and period of working overtime.

CHAPTER-8

CONCLUSION

CHAPTER 8: CONCLUSION:

From the survey, it can be concluded that,

- ✓ Number of working hours and current working hours satisfaction is 35.64% positively associated.
- ✓ Half of the respondents need 1 to 2 hours for their daily commute.
- ✓ Majority of the respondents work between 6-10 hours and most of them are somewhat satisfied with their working hours.
- ✓ Educational level and job satisfaction are 38.70% positively associated.
- ✓ Most of the respondents have less than 1 hour to relax or pursue activities after an average work day.
- ✓ From the study, it can be observed that the common causes of work stress are majorly working overtime and workload.
- ✓ There is a 24.06% association between the occupational sector and health benefits provided by the organization.
- ✓ 42% of the respondents say that unrealistic demands are the biggest threat to their work-life balance.
- ✓ Least employees have access to stress management programs at their current workplace.

CHAPTER-9

QUESTIONNAIRE

CHAPTER 9: QUESTIONNAIRE

A STUDY ON QUALITY OF WORKLIFE AND OCCUPATIONAL STRESS AMONG EMPLOYEES

1. Age group

- a) Under 18 b) 18-25 c) 25-40 d) 40 & above

2. Gender

- a) Male b) Female

3. Education level:

- a) Intermediate b) Graduation c) Post Graduation d) Others

4. Occupational sector:

- a) Government b) Private c) Business d) Others

5. Annual income:

- a) Less than Rs.3,00,000 b) Rs.3,00,000 to Rs.5,00,000
c) Rs.5,00,000 to Rs.10,00,000 d) Greater than Rs.10,00,000

6. Number of working hours

- a) Less than 6 hours b) 6 to 10 hours c) More than 10 hours

7. How satisfied are you with your current working hours?

- a) Very satisfied b) Somewhat satisfied c) Not too satisfied d) Not at all satisfied

8. How long is your daily commute

- a) Less than 1-hour b) 1 to 2 hours c) More than 2 hours

9. How long have you worked in your present organization?

- a) Less than 1 year b) 1-5 years c) More than 5 years

10. Which of the following best describes your usual work schedule?

- a) Day shift b) Night shift c) Split shift d) Irregular shift

11. How often do you work overtime?

- a) 1 hour b) 2 to 3 hours c) More than 3 hours

12. How many hours do you sleep on an average work night?

- a) Less than 4 hours b) 4 to 6 hours c) More than 6 hours

13. After an average work day, how many hours do you have to relax or pursue activities that you enjoy?

- a) Less than 1-hour b) 2 to 3 hours c) More than 3 hours

14. How often do the demands of your job interfere with your family life?

- a) Often b) Sometimes c) Rarely d) Never

15. Have you missed a personal event because of work?

- a) Yes b) No

16. What are the common causes of work stress in your life?

- a) Working overtime b) Workload c) Daily commute d) Lack of sleep

17. What are the consequences of work-life stress? (Choose more than one option)

- a) No interest in social interaction b) Loss of emotional hygiene
c) Screen fatigue d) Lack of personal growth

18. Which factor motivates you the most in your organization? (Choose more than one option)

- a) Salary increase b) Promotion
c) Motivational talk d) Recognition

19. Do you think the quality of work life of the organization helps to improve your productivity?

- a) Yes b) No

20. How can employees manage their workload effectively? (Choose more than one option)

- a) Prioritize tasks b) Allocate tasks smartly and fairly
c) Build a timeline d) Avoid multitasking

21. How often do you feel under pressure at work?

- a) Always b) Often c) Sometimes d) Never

22. How often do you take part with others in making decisions that affect you?

- a) Always b) Often c) Sometimes d) Never

23. What do you believe is the biggest threat to your work-life balance?

- a) Technology troubles b) Unrealistic demands
c) Social perceptions d) Lack of skills

24. Do you feel that the income from your job alone is enough to meet your family's usual monthly expenses and bills?

- a) Yes b) No

25. How would you rate the following on a scale of 1-5?

(1-excellent 2-very good 3-good 4-fair 5-poor)

a) Your work environment is positive and supportive	
b) Job suit my educational qualification	
c) You have access to stress management programs at your current workplace	
d) The training opportunities have helped in improving the quality of work	
e) I work a manageable number of hours	

26. How often do you work at home as part of your job?

- a) Never b) About once a week
- c) More than once a week d) Worker works mainly at home

27. My organization provides me with health benefits.

- a) Yes b) No
